

HONEYWELL PHOTOGRAPHIC PRODUCTS

ROLLEI 35 world's smallest 35mm full frame camera

Measuring only 1¼" by 3⅞" by 2⅜", the Rollei 35 easily slips into a shirt or coat pocket. Yet it uses standard 35mm film and produces regular full frame 35mm transparencies or negatives on 12, 20, or 36 exposure rolls.

The built in CdS exposure metering system uses a match needle system and is coupled to the aperture, shutter and film speed controls for simple and accurate exposures.

The incredibly sharp 40mm Tessar lens retracts into the camera body when not in use. The shutter will not release unless the lens is extended and locked. Aperture settings from f/3.5 to f/22 with click stops at every ⅓ stop are pro-

vided. Shutter speeds are from 1/2 to 1/500 second plus bulb.

An engraved bright frame in the oversized viewfinder outlines picture composition. The exposure counter automatically resets when the back is opened. The film speed dial is calibrated for ASA values from 25 to 1600. The tripod socket accepts standard ¼-20 tripod screws. Flash synchronization is through the hot shoe.

The Rollei 35 comes in a chrome and black leatherette finish or in all black finish.

SPECIFICATIONS:

Size:

1¼" by 3⅞" by 2⅜"

Weight:

13½ ounces

Lens:

40mm f/3.5 Tessar by Carl Zeiss

Battery:

PX13 or E625 mercury cell (included)

Shutter:

Compur with X flash synchronization at all speeds from 1/2 to 1/500 second and bulb

Exposure Metering:

match needle CDS type by Gossen

Focusing:

engraved scale on outer lens ring with depth of field indication

Cat. No. 1060 ROLLEI 35 chrome with wrist loop and lens cap.....[17133-07] \$199.50
Cat. No. 1062 ROLLEI 35 black with wrist loop and lens cap[19146-41] \$219.50

ROLLEIFLEX SL 26

cartridge convenience with
Rollei quality

The SL 26 is the smallest single lens reflex cartridge camera on the market, measuring 3½" by 4" by 2¾" and weighing only 19 ounces. Exposures are set with the through the lens CdS metering system by leveling the indicating needle within the viewfinder. The meter is automatically set for the correct ASA film speed by a notched coding on each film cartridge.

A 40mm f/2.8 Zeiss Tessar lens is standard. A 28mm, f/3.2 Pro-Tessar wide angle lens and an 80mm, f/4.0 Pro-Tessar telephoto lens are also available. Only the front ele-

ments are exchanged when changing lenses, thus protecting the camera interior from stray dust and resulting in lighter and smaller wide angle and telephoto lenses.

The Compur shutter offers X flash synchronization through its full range of speeds from 1/2 to 1/500 second plus bulb.

The camera comes equipped with a hot shoe built into the top of the pentaprism, a rapid advance lever, built in neck strap loops and an easily accessible meter battery compartment on the side.

SPECIFICATIONS:

Size:

4" x 2¾" x 3½", including standard lens

Weight:

19 oz. with standard lens

Lens:

Interchangeable Carl Zeiss lenses, 40mm lens is standard

Shutter:

Compur between the lens shutter with speeds from 1/2 to 1/500 second plus bulb with X flash synchronization at all speeds

Exposure Metering:

CdS through the lens system coupled to shutter speed and aperture controls with indicator needle in viewfinder

Battery:

PX13 on E625 mercury cell (included)

Focusing:

Oversize brilliant focusing screen with split-image range-finder wedge in center surrounded by a large micro prism band

ROLLEI 16S CAMERA the precision mini-camera

The Rollei 16S is a small, easily pocketed, automatic subminiature camera using 16mm, single perforated film. Its convenient 12x17mm format permits extended enlargements and screen filling color slides. The Rollei 16S automatically selects the best exposure time and lens opening between 1/30 and 1/500 second and f/2.8 and f/22. Maximum optical performance is achieved with a focusing 25mm Zeiss Tessar f/2.8 lens. Recessed into the body to eliminate the need for a lens-hood, the short focal length of the lens offers amazing depth of field even at full aperture. The green "go" signal in the viewfinder indicates when adequate light is available and that the shutter speed and aperture have been automatically and uniquely set for the fastest

shutter speed possible. This insures sharp pictures of moving subjects and reduces risk of camera shake or movement during exposure. For flash shots and manual exposures the Rollei 16S uses 1/30 second shutter speed and aperture choices range from f/2.8 to f/22. The Rolleiflash 16 attaches to the base end of the camera and uses AG series flash lamps. Electronic flash synchronizes through the connector socket located on the base end of the camera or on the Tripod Adapter.

Time exposure "B" of any length can be done with aperture selections from f/2.8 to f/22. (Cable release socket provided)

Size:

1 1/8" high, 1 3/4" wide and 4 3/8" long

Weight:

9 1/8 ounces

Film:

Super 16 cassetts with Black & White, Color Slide and Color Print Films yielding, 18 exposures, 12 x 17mm

Shutter and advancing mechanism:

Film transport automatically cocks shutter and advances film counter, film advances only after exposure. Shutter has double exposure prevention.

Focusing:

With distance scale using settings from 16 inches to infinity

Meter Settings:

ASA and DIN film settings from ASA 12 to 200, as well as filter value compensation (3 Exposure Values by one-third click-stop intervals)

Lens Mount:

4-lug bayonet (Bay. "O") for filters and Mutar lenses

View Finder:

Optical brilliant-line, Albada type, mechanically parallax compensated, with three frames: the entire frame for the wide angle lens; the larger frame for the normal lens; and an inner frame for the telephoto

Cat. No. 2114	ROLLEI 16S KIT. Camera with wrist loop, leather case, measuring chain, Rolleiflash 16 with case, tripod adapter, medium yellow filter, H-1 filter packaged in a jewel case	[21158-34]	\$237.50

ROLLEI 16S ACCESSORIES

for the precision mini-camera

Lenses

Superb Carl Zeiss lens systems bayonet directly to the Rollei 16S for wide-angle and telephoto photography. Conversion scales for distance settings make precise focusing easy. The front mounts have 55mm outside threads for screw on filters. With its standard lens, the Rollei 16S has a 45 degree angle of view with a 16" minimum focusing distance. With the Telephoto Mutar lens, a magnification of 1.7 is accomplished with a minimum focusing distance of 40" and a 27 degree angle of view. The Wide-Angle Mutar yields a 8" minimum focusing distance and a 65 degree angle of view. Both accessory lenses come with leather case.

Cat. No. 2126 Wide Angle Mutar [7276-65] \$109.50
 Cat. No. 2127 Telephoto Mutar [8990-65] \$129.50

Leather Case

Deluxe black leather case with zipper opening comes with each Rollei 16S. Wrist loop slips through grommetted opening in the end of the leather case.

Cat. No. 2101 (replacement) [517-00] \$ 10.50
 Part No. 96010.41.0 Spare Wrist Loop Rollei 16 [211-50] \$ 2.00

Measuring Chain

For convenient and quick distance measurements at distances between 16 and 24 inches. The chain attaches to the wrist loop swivel and has marks at 1.3', 1.4', 1.5', 1.7' and 2'

Cat. No. 2105 [253-00] \$ 4.50

Rolleiflash 16

This flashgun mounts directly on the camera with a 1/4 turn spring loaded bayonet. The Rolleiflash uses AG series bulbs in a reflector contoured for even illumination. It comes with its own black case. The flash operates on an Eveready No. 504 15v battery or equivalent.

Cat. No. 2106 (Less Battery) [1410-00] \$ 15.00

Tripod Adapter

Vertical or horizontal mounting on tripods with standard 1/4-20 threading is easy with the Tripod Adapter. The adapter bayonets with a quarter turn to the end of the camera, has a lock release and a PC flash connector outlet.

Cat. No. 2107 [926-67] \$ 10.00

Filters

Each Rollei 16S accessory filter is constructed with special thin glass to retain maximum sharpness. Each is selectively multi-coated for maximum contrast. The filters bayonet to the camera and have the exposure correction factor engraved on the mount.

Cat. No.
 2110 Medium Yellow Filter [514-64] \$ 6.95
 2112 Green Filter [514-64] \$ 6.95
 2113 Orange Filter [514-64] \$ 6.95
 2120 H-1 Filter [515-67] \$ 8.50
 2125 R1.5 Filter [515-67] \$ 8.50

Slide Mounts

Slide mounts with anti-newton ring cover glass are available. The rigid plastic mountings are 2" by 2" overall with 12 x 17mm aperture.

Cat. No.
 2131 Slide Mounts with Anti-Newton Glass,
 Box of 20 [202-00] \$ 3.00
 1761 Replacement Anti-Newton Glass,
 Package of 40 pieces [101-83] \$ 2.75

Films

The Rollei 16S produces 18 exposures on single perforated 16mm film, each with the German standard 12 by 17mm format.

XT Panchromatic is a black and white film with extremely fine grain and an ASA of 25. PX Panchromatic is an all-purpose black and white film with a 125 ASA rating. XX Panchromatic is a faster black and white film with an ASA of 200. For color slides either Kodachrome II with very fine grain and an ASA of 25 or Ektachrome MS with an ASA of 64 and excellent color rendition may be used. For color prints Ektacolor S with an ASA of 100 is available. All are balanced for daylight, blue bulbs or electronic flash.

Cat. No.
 2141 XT Panchromatic Twin Pack [161-50] \$ 2.50
 2142 PX Panchromatic Twin Pack [161-50] \$ 2.50
 2143 XX Panchromatic Twin Pack [161-50] \$ 2.50
 2146 Kodachrome II Single Pack [92-93] \$ 1.55
 2147 Ektachrome MS Single Pack [92-93] \$ 1.55
 2148 Ektacolor S Single Pack [911-26] \$ 2.10

Film Cassettes

16mm film cassettes are available for those wanting to load their own films.

Cat. No. 2150 Set of 6 Cassettes with cans [201-69] \$ 2.25

Prepaid, Postpaid Processing Mailers

Processing mailers are available for black and white prints, for color transparencies or for color prints. This means convenient processing for the most convenient camera on the market. Pako Photo, through these mailers, offers dependable, rapid and high quality processing services.

Cat. No.
 2151 Processing Mailer for Black and
 White Film [192-37] \$ 3.95
 2152 Processing Mailer for Color Slides [191-50] \$ 2.50
 2153 Processing Mailer for Color Prints [194-17] \$ 6.95

HONEYWELL PHOTOGRAPHIC PRODUCTS

ROLLEIFLEX SL66

the absolute ultimate

The SL66 is the new standard for fine photographic equipment. Created by the world famous Rollei-Werke, West Germany, the SL66 is the culmination of more than 40 years of research, design and experience in 2 1/4 precision camera manufacturing.

Unexcelled image brightness is due to a combination of two factors: the exceptionally sharp Carl Zeiss optics; working within a bellows system that baffles and traps all peripheral light.

Using its built-in bellows gives the SL66 additional exclusives: The lens and bellows tilt eight degrees up or down for an extended zone of sharpness according to the Scheimpflug Principle. Thanks to the bellows and reverse lens capabilities, negative images that are larger than actual size with optimum lens performance can easily be created without the purchase of additional accessories.

The exclusive pneumatic mirror dampening system makes hand held exposures possible at slower speeds, since mirror vibration is far less than with any other 2 1/4 single lens reflex camera. There is no image blackout since the mirror is an instant return type. For special exposure applications the mirror can easily be locked up.

Either 120 or 220 film can be used with the standard magazine. The exposure counter automatically adjusts for either size and gives an audible and visual signal to indicate the end of the film roll. The dark slide can be stored in a slot on the magazine back when not in use and the dark slide's handle holds the end of the film box as a film type reminder.

A rapid wind crank, with a handle that folds into the winding knob, is standard. Film speeds range from 1 second to 1/1000 second plus bulb. Precise multiple exposures can be made without film magazine removal.

Cat. No. 1066	ROLLEIFLEX SL 66 with interchangeable 120/220 magazine and Zeiss Planar 80mm f/2.8 lens	[93663-371]	\$995.00
Cat. No. 1067	ROLLEIFLEX SL 66 less lens & magazine	[93366-691]	\$550.00
Cat. No. 1068	ROLLEIFLEX SL 66 less lens with magazine	[93493-361]	\$740.00

ROLLEIFLEX SL 66

the absolute ultimate

Specifications

Camera Type:

single lens reflex, 2¼" by 2¼", 120/220 roll film

Weight:

4 lbs., 3 oz. with magazine back and 80mm f/2.8 lens

Size:

5-5/16" wide between the outer edges of the knobs
5-5/16" from front to back without lens attached,
4-7/16" high with the focusing hood collapsed

Focusing:

standard focusing screen has a central micro prism grid and the standard focusing hood is collapsible with a pop-up magnifier. Both focusing screen and hood are interchangeable. Has a depth of field preview control

Shutter Speeds:

1 second to 1/1000 plus bulb

Operating Controls:

all visible from above

Mirror:

quick return pneumatic dampened with pre-release to lock mirror out of light path

Bellows:

extends 50mm and can be tilted $\pm 8^\circ$ up or down

Scales:

focusing strut indicates bellows extension and reproduction ratios for 80, 150, 120 and 80mm reversed lenses. Easily switched distance and depth of field scales provide for 50, 80, 150 and 250mm lenses on focusing knob

Synchronization:

for X and FP with positive locking cord connector and flash accessory shoe

Tripod Mounting:

⅜" threading with ¼-20 socket bushing provided

Film Transport:

crank operated with override for intentional multiple exposures

ROLLEIFLEX SL 66 INTERCHANGEABLE LENSES

creating the super system

These superb Carl Zeiss lenses are specially formulated for the Rolleiflex SL 66. All are color corrected to precise Zeiss and Rollei standards. All have quick-change bayonet mounts. Lenses from 40mm to 250mm feature automatic diaphragms and 1/2 stop click aperture controls.

Cat. No. 1082—Zeiss Distagon 40mm f/4.0 wide angle lens with fully automatic diaphragm. Aperture range f/4.0 to f/32. Weight 45 oz.; length 5"; diameter 4-1/16"; number of elements 10; angle of view, diagonal 88° Minimum focusing distance less than 2" [20516-69] **\$775.00**

Cat. No. 1072—Zeiss Distagon 50mm f/4.0 wide-angle lens with fully automatic diaphragm is reversible for macro work in which the scale of reproduction without extension tubes is 3:1. Aperture range f/4.0 to f/32; weight 21 oz.; length 3 3/4"; diameter 3 1/8"; number of elements 7; angle of view, diagonal 75° Minimum focusing distance: 2" (lens in normal position) [21280-00] **\$420.00**

Cat. No. 1073—Zeiss Planar 80mm f/2.8 supplied as standard with the Rolleiflex SL 66 has a fully automatic diaphragm. This lens is also reversible for macro work in which the scale of reproduction without extension tubes is 1.6:1. Aperture range f/2.8 to f/22; weight 11 oz.; length 2 1/2"; diameter 3 1/8"; number of elements 7; angle of view, diagonal 52° Minimum focusing distance: 6 1/2" (lens in normal position) [22170-00] **\$255.00**

Cat. No. 1074—Zeiss S-Planar 120mm f/5.6 lens, with fully automatic diaphragm, is particularly well suited for close-up and portrait photography. Reversible for macro work in which the scale of reproduction without extension tubes is 0.8:1. Aperture range f/5.6 to f/45; weight 16 oz.; length 3 1/2"; diameter 3 1/8"; number of elements 6; angle of view, diagonal 36° Minimum focusing distance: 14" (lens in normal position). [63300-00] **\$450.00**

Cat. No. 1075—Zeiss Sonnar 150mm f/4.0 with fully automatic diaphragm. The lens elements are formulated and positioned so that complete field coverage is achieved at maximum aperture. Aperture range f/4 to f/32; weight 20 1/2 oz.; length 3 3/4"; diameter 3 1/8"; number of elements 5; angle of view, diagonal 29° Minimum focusing distance: 23 1/2" [71286-68] **\$430.00**

Cat. No. 1076—Zeiss Sonnar 250mm f/5.6. Fully automatic diaphragm. An exceptionally fine telephoto lens utilizing the Sonnar design and a proven f/stop of 5.6, which provides good illumination for accurate focusing. Aperture range f/5.6 to f/45; weight 25 oz.; length 5 5/8"; diameter 3 1/8"; number of elements 4; angle of view, diagonal 18° Minimum focusing distance: 5' [63300-00] **\$450.00**

Cat. No. 1077—Zeiss Tele-Tessar 500mm f/5.6. A well balanced, easy handling, long telephoto lens with built-in tripod socket and preset diaphragm. Aperture range f/5.6 to f/45; weight 3 lbs. 9 oz.; number of elements 6; angle of view, diagonal 9° Minimum focusing distance: 19' [25663-37] **\$995.00**

Zeiss Mirotar 1000mm f/5.6 telephoto lens. Aperture f/5.6 additional f/stop control by neutral density filters; weight 36 1/2 lbs.; length 16"; mirror optic; angle of view, diagonal 4.5° Minimum focusing distance: 72' Please contact Carl Zeiss for price and ordering information not supplied by Rollei/Honeywell.

ROLLEIFLEX 2.8F/120-220

the established standard among the professionals

The Rolleiflex 2.8F and its companion unit, the 3.5F on page 14, are probably the most widely respected and frequently used cameras in the working world of professional photography. With an unmatched reputation for dependability, the Rolleiflex 2.8F features a Zeiss Planar 80mm f/2.8 lens that gives needle sharp definition and excellent contrast from the center to the corners of the 2 $\frac{1}{4}$ "x2 $\frac{1}{4}$ " negative at any aperture. A lever on the side sets the exposure counter for either 24 exposures on 220 film or 12 exposures on 120 film. A speed-f/stop coupled exposure meter is built in and uses match-needle control for proper exposures with compensation for filters. The metering system can be set for ASA ranges from 12 to 1600. Shutter speeds range from 1 second to 1/500 second plus bulb. The shutter is synchronized

for either M or X at all speeds. The shutter also has a self-timer. The micro-prism focusing screen has a circular grid in the center for quick focusing. There is a pop-up magnifying glass in the hood to facilitate critical focusing. The hood quickly converts to an eye level sports finder for easier following of motion and permits eye-level focusing. An automatic depth of field indicator is provided. The lens has automatic parallax compensation at all distances. The rapid wind crank advances the film and cocks the shutter simultaneously. There is also multiple exposure provision and automatic film positioning for the first exposure after loading.

The Rolleiflex 2.8F/120-220 weighs 44 ounces and measures 5 $\frac{7}{8}$ " by 4 $\frac{3}{8}$ " by 4 $\frac{1}{8}$ "

ROLLEIFLEX 3.5F

the ever popular professional camera

The Rolleiflex 3.5F has all the features and quality of the 2.8F model with a slightly slower lens. A special version of the 3.5F should be ordered if 220 film capability is desired.

The Rolleiflex 3.5F uses a Zeiss Planar F/3.5, 75mm lens that gives needle sharp definition and an excellent contrast from the center to the corners of the 2 1/4" by 2 1/4" negative at any aperture. A speed-f/stop coupled exposure meter is built in and uses a match-needle control for proper exposures with compensation for filters. The metering system can be set for ASA ranges from 12 to 1600.

Shutter speeds range from 1-1/500 second plus bulb. The shutter has a self-timer. The shutter is flash synchronized for either M or X at all speeds.

The Rolleiclear focusing screen uses a split-image rangefinder in the center for easy focusing. There is also a pop-up magnifying glass in the hood to facilitate critical focusing. The hood quickly converts to an eye level sports finder for easier following of motion and permits eye level focusing. The lens has automatic parallax compensation at all distances. There is multiple exposure provision and automatic film positioning for the first exposure after loading. The rapid wind crank advances the film and cocks the shutter simultaneously. There is an automatic depth of field indicator.

The Rolleiflex 3.5F weighs 43 ounces and measures 5 7/8" by 4 3/8" by 4"

HONEYWELL PHOTOGRAPHIC PRODUCTS

TELE-ROLLEIFLEX the perfect portrait camera

The Tele-Rolleiflex gives traditional Rollei performance in a semi telephoto camera. The 135mm f/4 Zeiss Sonnar has a 33 degree angle of view. For applications needing magnification with critically sharp negatives, the Tele-Rolleiflex is ideal. The camera produces 12 2 $\frac{1}{4}$ " by 2 $\frac{1}{4}$ " negatives on 120 film. Modification to accept 220 film is also possible.

The viewing lens has automatic parallax compensation at all distances. Shutter speeds range from 1-1/500 second plus B with M and X flash synchronization at all speeds. The shutter has a self-timer. The shutter and f/stop combinations may be coupled or

uncoupled. There is an accessory exposure metering system which can be added. Depth of field is automatically indicated on the distance scale.

A split image rangefinder wedge is centered in the viewing screen for faster focusing. The focusing hood has a pop-up magnifier for critical focusing and quickly converts to a sports finder for following action and permits eye level focusing.

The Tele-Rolleiflex weighs 54 ounces and measures 5 $\frac{3}{4}$ " by 4" by 5 $\frac{5}{8}$ "

ROLLEIFLEX T

a multi-format camera

The Rolleiflex T offers a true Rolleiflex at an economical price and with several format options. With an optional mask set it can produce 16 1⁵/₈" by 2¹/₈" exposures or 16 1⁵/₈" by 1⁵/₈" exposures on a roll of 120 film. Without the masks it gives the standard 12 2¹/₄" by 2¹/₄" exposures on a 120 roll. All formats have full parallax correction and automatic exposure counting.

The famous 75mm Zeiss Tessar f/3.5 lens is standard. Fast focusing is easy with the split image range-finder wedge centered in the Rolleiclear focusing screen. The pop-up magnifier helps with critical fo-

ocusing. The focusing hood also quickly converts to an eye level sports finder for following motion.

The camera is prewired for installation of an exposure meter system.

Shutter speeds range from 1 second to 1/500 second plus B with X synchronization at all speeds. The aperture and speed controls are operated by one convenient lever. The rapid wind crank advances the film and cocks the shutter simultaneously. There is a self-timer and depth of field scale.

The Rolleiflex T weighs 36 ounces and measures 6" by 4¹/₂" by 3³/₄"

Cat. No. 1012	Rolleiflex T	[25186-34]	\$279.50

ROLLEICORD Vb

the economy Rollei

The Rolleicord Vb is the most economical Rollei and features the most versatile format choice. Use of the optional exposure counter kits makes five different formats possible. Besides the standard 12-2 $\frac{1}{4}$ " by 2 $\frac{1}{4}$ " exposures; 16-1 $\frac{5}{8}$ " by 2 $\frac{1}{8}$ ", 16-1 $\frac{5}{8}$ " by 1 $\frac{5}{8}$ ", 24-1 $\frac{1}{8}$ " by 1 $\frac{5}{8}$ " or 24-1" by 1 $\frac{1}{2}$ " are possible. Parallax compensation and exposure counting are automatic for all formats.

Focusing is quick with the split image rangefinder wedge in the center of the Rolleiclear screen. The

focusing hood has a pop-up magnifier for quick focusing and quickly converts into a sports finder for following action.

Shutter speeds range from 1 second to 1/500 second plus B with X synchronization at all speeds. There is also a self-timer.

The Rolleicord Vb weighs 33 ounces and measures 5 $\frac{1}{2}$ " by 4" by 4"

TLR ACCESSORIES

the Rollei Penta Prism

The Rollei Penta Prism facilitates viewing and focusing when it is desirable to photograph at eye-level. The Prism reproduces the viewfinder image on an upright plane, laterally correct. Following motion is easy and natural. The Pentaprism fits all 2¼" x 2¼" Rollei cameras with removable focusing hood; the Rolleiflex T; 3.5F, 2.8F, Tele, Wide-Angle, E2-3, Magic and Rolleicord Vb. The ocular hood gives complete protection against extraneous light for clear viewing under the most difficult conditions. Attaching and removing the Penta Prism is accomplished with the same simplicity as with the focusing hood. The Pentaprism weighs 14½ ounces.

There is also a special front for the Eveready case to use with the Penta Prism. It fits all Rollei 2¼ by 2¼ camera cases with detachable front flaps except Tele and Wide Angle cases.

For photographers who wear glasses, the Penta B Eyepiece attachment makes focusing much easier.

METAL CASES

This sturdy metal case encloses the camera for full protection in severe weather or other adverse conditions. With rubber-sealed closure edge, this air, dust, and water-tight case floats with the camera inside. It has a pivoted camera-holding bracket for quickly swinging the camera into shooting position and internal clips for two rolls of extra film or desiccant cartridges. For use with all Rolleis with grooved tripod base plate except Tele and Wide-Angle models. Weight without camera is about 23 oz. A desiccant cartridge is included. (For Rolleiflex 2.8 above No. 1,260,000; Rolleiflex 3.5 above No. 1,267,000; Rolleicord above No. 1,344,000; and Rolleiflex 4x4.)

Rollei Filter	Use	Exposure Increase	Exposure Value Adjustment
Light Yellow Medium Yellow	Landscapes, snow, clouds. Renders yellow and green lighter, blue darker.	2x 3x	1 1.5
Light Green Green	Landscapes, snow, clouds. Renders green lighter, red (complexion) and blue darker. For panchromatic emulsions. Gives stronger effects than light green.	2x 3x	1 1.5
Orange	Hazy distant views. Renders yellow-red lighter, blue darker, distant objects clearer.	3-7x	1.5 to -3
Light Red	Hazy distant views. Renders red lighter, blue-green darker. Gives stronger effects than Orange Filter.	4-10x	-2 to -3.5
Light Blue	Artificial light. Renders red darker. For ultra-pan emulsions.	1.5x	-0.5
UV	High altitudes above 6,000 feet. Seascapes. Eliminates ultra-violet rays which reduce contrast.	1.5x	-0.5
Infra-Red‡	Special filter for infra-red emulsions. Transmits dark red above 700m μ and infra-red.	*	*

‡ The infra-red filter features special compensation for focusing difference between visible and infra-red portion of the spectrum. Direct ground glass focusing may be employed with full assurance of sharp pictures.

* Exposure depends on type of emulsion used and must be determined by test.

FOR COLOR FILMS

These filters provide a simple method of balancing the temperature of the prevailing light to the color film. The R series are warming filters; the B series are cooling filters. Double bayonet mounts permit combining filters. A set of six filters with a case, R2, R5, R11, B2, B5 and B11, in Bayonet III to fit the 2.8 and Tele-Rolleis may be ordered as Cat. No. 1329.

filters

ROLLEIPOL POLARIZING FILTER

For black & white or color, this filter is designed to eliminate or reduce reflections and glare from shiny, non-metallic objects and for filtering of blue sky. It is particularly useful in controlling sky tone in color pictures.

Effects may be predetermined by viewing the subject through the filter on the viewing lens and then transferring the filter to the taking lens in the same position. Exposure compensation is 1½ stops.

ROLLEISOFT DIFFUSING FILTERS

For softening of definition. Rolleisofts produce striking halo effects and are most effective for glamorizing portraits, particularly when making back-lighted pictures. Rolleisoft mounts permit the simultaneous use of Rolleinar lenses, filters and lens hood. They are anti-reflection coated. Case included.

The Rolleisoft O for weak soft-focus effect. Primarily for strong contrasts of bright, glittering objects and backlighted subjects.

The Rolleisoft I offers a greater soft-focus effect and is best suited for contrasty, highlighted subjects; portraiture.

ROLLEINAR CLOSEUP LENSES

Each Rolleinar set consists of a parallax compensated viewing lens and a taking lens. Rolleinar lenses are coated and no exposure compensation is required. The bayonet mounting on the front permits using filters. Each set comes with instructions. Set 1 Rolleinars give an approximate subject area of 13" by 13" With the 80mm and 60mm lenses this means a working range from 18½" to 39½" With the 75mm lens it gives a working range from 17¾" to 39½" Set 2 Rolleinars are slightly stronger, covering an approximate subject area of 8" by 8" The working range for 80mm and 60mm lenses with Set 2 Rolleinars drops to 12½" to 19¾" With the 75mm lens it ranges from 19¾" to 12½" The Set 3 Rolleinars are the strongest with an approximate subject area of 6" by 6" Set 3 Rolleinars give 80mm, 75mm and 60mm lenses a working range between 13" and 9⅞"

There are also three special Rolleinar sets. The Rolleinar 0.35 gives the Tele-Rolleiflex a close-up range from 9'2" to 4'5" The Rolleinar 0.7 gives the Tele-Rolleiflex a close-up range between 4'6½" and 3'½" The Tele-Rolleiflex can also use the Rolleinar Sets 1 and 2 Bayonet III. The Wide-Angle Rolleiflex has a special Rolleinar set that extends its focusing range down to 9½"

PISTOL GRIP

This sturdy, lightweight support is shaped to fit the right hand. Designed primarily for eye-level shooting, it also permits steady shooting at waist or chest level. The grip has a Rolleiflex clamp-mount, shoulder ledge for mounting standard flash bracket, smooth trigger, trigger safety lock, and adjustable cable release for selective trigger travel. Fits all Rolleis with grooved edge on tripod base plate; Rolleiflex 2.8 above No. 1,260,000, Rolleiflex 3.5 above No. 1,267,000, Rolleicord above No. 1,344,000, Tele-Rollei, Wide-Angle Rollei, Rolleiflex 4x4, and Rollei-Magics.

FOCUSING SCREENS WITH RANGEFINDER WEDGE

A Rolleiclear focusing screen with a 5mm diameter rangefinder wedge in the center of the field is available. Operating on the principal of a split-image rangefinder, the broken image outlines match when the camera is critically focused. The extra brightness of this focusing aid with its clear image area is particularly valuable for defining maximum screen sharpness in low light level, or for extremely fast focusing. The screen may be installed by Rollei owners who have cameras fitted with removable focusing hoods.

Cat. No. 1540	[716-63]	\$ 9.95
----------------------------	-----------------	----------------

Note: The ground glass focusing screen of all 2¼x2¼ Rolleis from the Rolleiflex Old Standard (1932) through recent models can be replaced with the Rolleiclear. Screens are supplied in sizes to fit specific former model 2¼x2¼ Rolleis and must be installed by a factory authorized service shop where correct collimating of the viewing lens image can be precisely matched to that of the taking lens.

Installation and refocusing	[116-38]	\$ 8.50
--	-----------------	----------------

FOCUSING SCREENS WITH CENTRAL MICRO PRISM GRID

A Rolleiclear focusing screen with a central micro prism grid is now available to fit all Rollei twin lens reflex cameras with removable focusing hoods. The grid 5/8" diameter consists of several thousand micro prisms which form a clear and distinct image when the subject is in critical focus. The image immediately appears blurred when the prime subject is not correctly focused. This new focusing aid is well suited to action photography with its increased speed of operation. Greater image brilliance lends added ease in focusing under poor lighting conditions.

Cat. No. 1559	[717-97]	\$ 11.95
----------------------------	-----------------	-----------------

SPECIAL FLAT GLASS ATTACHMENT

This attachment consists of two items: a glass plate, and a special back. Specially coated, the optically-flat glass makes for extreme plate-like flatness of the film when the most critical results are required. Easily installed, the glass plate's beveled edges at top and bottom are held by retaining bars in the film gate. The special back has a three-position film pressure plate with two different positions for 2¼ x 2¼. The Rolleikin 35mm attachment may also be used with the special back, but without glass. For use with 2.8F, 2.8E-3, 2.8E-2, 3.5E-3, above No. 2,230,000 to 2,451,849 and 3.5F models below 2,815,030, also Wide Angle Rolleis and most Tele Rolleis.

Cat. No. 1514 Spare Flat Glass	[429-00]	\$ 13.50

TLR ACCESSORIES

Rolleikin 35mm Adapter

The Rolleikin Adapter permits use of 35mm film in all 2 1/4 x 2 1/4 Rolleis, except Rollei-Magics. Rolleikin 2 is for Rolleiflex 2 1/4 x 2 1/4 cameras above No. 1,100,000 (except R'flex T below No. 2,151,000) and Rolleicord cameras above No. 1,137,000. If cameras in this series are not already equipped with an adjustable pressure plate, a combination back must be ordered additionally for use with the Rolleikin 2. The Rolleikin adapts the Rollei to 35mm film cartridges of 12, 20 or 36 exposures.

Cat. No. 1530 [2731-67] \$ 47.50

Rolleikin 2.8, for 2.8 C, D, E only and Tele-Rollei below No. 2,305,001, less Exposure Counter Knob.

CUT FILM ADAPTER KIT

Designed for use with 2¼x2¼ Rolleis where single exposures or the use of special negative and positive materials in color and black and white are desired, or immediate, individual processing is called for. Optional is a direct focusing screen that permits critical focusing with the taking lens where exact, complete use of the picture format is required. For use with Rolleiflex and Rolleicord models, except 4x4 and Rollei-Magic I and II. Includes adapter back and 3 special film holders with 3 cut-film sheaths. Film size required is 2½ by 3½.

TLR ACCESSORIES

ROLLEIFLASH 2

The Rolleiflash 2 reflector is adjustable for normal or long shot illumination. This gives stronger coverage with the Tele-Rolleiflex or with reduced format sizes. The brightly pebbled surface delivers a very even illumination. The universal socket accepts 3 flash bulb types: Standard Midget, No. 5, etc.; Subminiature, M-2, M-5, etc. and European all-glass base, XM 1, XM5 Z, etc. The Rolleiflash 2 has a built-in test lamp, an open flash firing button with a lock, self locking twin flash cord sockets, a lamp ejector and an f/stop calculator that automatically indicates the f/stop needed for any distance, guide number and reflector position combination. The arm bracket swings and locks, detaches and folds. Using right angle self locking tips, the 12" coiled cord extends to 40" when needed. The Rolleiflash 2 also comes with zippered carrying case. Accessories include a connector block for two cords with twin self locking sockets, extension units, extra length cords and cables plus extra brackets.

ROLLEIMOT

ELECTRIC REMOTE CONTROL

The Rolleimot is particularly valuable in photographic situations which require the photographer to be at a distance from his camera, such as unobtrusive feature photography, technical recording work in inaccessible or dangerous places, and wild-life pictures. Designed for use with the 2 1/4 x 2 1/4 SL66, Rolleiflex and Rollei-Magic models, the Rolleimot can be operated at distances up to 650 feet by means of the remote cable and switching control. With the battery-powered (4 size "D" Alkaline cells) Rolleimot the photographer can advance the film and release the shutter through a complete roll of film by remote control. A warning light indicates when the camera is ready for the next exposure and signals the end of film. Works perfectly for electronic flash shots on camera, or extension located off camera. Complete with adapter plate and dual arms to fit 2 1/4 SLR & TLR cameras.

HONEYWELL PHOTOGRAPHIC PRODUCTS

TLR ACCESSORIES

ROLLEIFIX-TRIPOD HEAD

ROLLEIFIX TRIPOD HEAD

Mounted on a tripod, attached to a flashgun or Panorama Head, the Rolleiflex provides for quick fastening or removal of the camera. It permits successive rolls of film to be exposed of the same fixed subject by a tripod-mounted camera without disturbing the original camera-subject orientation. Fits all Rollei cameras with grooved edge on tripod base plate; Rolleiflex 2.8 above No. 1,260,000, Rolleiflex 3.5 above No. 1,267,000, Rolleicord above No. 1,344,000, Tele-Rolleiflex, Wide-Angle Rollei, Rolleiflex 4x4, and Rollei-Magics.

Cat. No. 1506 [536-63] \$ 9.95

PANORAMA HEAD

PANORAMA HEAD

Especially designed for taking panoramic views with a tripod-mounted Rolleiflex or Rolleicord. The head is divided into 10 sections, making a complete circle of 360°. Each picture has a small overlap for mounting into a perfect panoramic scene. A sensitive spirit level is built in for exact horizontal alignment.

Cat. No. 1507 [9111-67] \$ 17.50

LEFT—ROLLEI W/MICRO TUBE + PRISM
RIGHT—WITH MICRO TUBE ONLY

ROLLEI MICRO ATTACHMENT

For use of the microscope with the Rollei. Combining the precision of both, the Micro Attachment is universally applicable within the complete range of photomicrography. Permits utilization of the complete circular picture area in both Rollei sizes 6x6cm and 4x4cm. The Micro Attachment is composed of two parts. The Micro Tube is for attaching to a standard 25mm microscope ocular. Used alone, it permits micro-pictures of non-moving objects. The camera is attached alternately by viewing lens and taking lens for focus and exposure by means of bayonet ring. Bayonet Rings are available individually for using different model Rollei cameras with the same Micro Tube. The Micro Prism is used with the Micro Tube. It covers all possibilities of photomicrography, including living specimens. The prism mounts directly on taking lens, permitting constant control of picture field, even during exposure, by means of a focusing ocular. (With Bayonet Ring I 6x6 only. In use, it requires switching bayonet rings of Tube and Prism if tube is not Bayonet I 6x6) Prism has adjustable ocular for individual eye-sight.

TLR ACCESSORIES

ROLLEIMARIN IV

The Rolleimarin housing permits underwater operation of the Rolleiflex 3.5F at depths down to 300 feet. With the camera inside, the unit weighs only 3 pounds underwater for maximum handling ease. The all-metal housing is corrosion resistant and sea-green in color. It has an angled viewing magnifier for focusing and a supplementary parallax compensating open frame viewfinder on top. Shutter and speed selection, focusing, film advancing and flash photography are all easily accomplished underwater. The Rolleimarin comes with control coupling turret, focusing knob coupler and meter storage case.

Accessories include heavy reinforced sail cloth canvas cases with internal blocking for protection and easy carrying. The canvas cases for the flash attachment have an inside pocket for the battery pack. Flash accessories include the Flash Unit 2 which equips the Rolleimarin 4 for flash on the left side (focusing knob side). It includes a flash arm with a three-position tilt-head, reflector, BC battery pack 4 and a set of two canvas cases. Flash Unit 1 equips the Rolleimarin 1, 2 and 3 for flash, also on the left side. It has a flash arm with a fixed head, reflector, BC Battery Pack and a set of two canvas cases. The Extension Flash permits simultaneous firing of two bulbs, one at each side. It has a dual plug, reversed mounting foot and accessory shoe with screws for mounting on the right side of the Rolleimarin. Housings numbered 1586 and on up are already fitted with the required threaded holes. A battery pack is not required. The Extension Flash includes the right flash arm with tilt head, reflector, mounting shoe with two screws and a set of two cases.

Cat. No. 1854 Rolleimarin 4 (for Rolleiflex 3.5F above No. 2,250,000 only) Includes control coupling turret, focusing knob coupler, open frame finder, and meter storage case [29330-02] **\$495.00**

HONEYWELL PHOTOGRAPHIC PRODUCTS

Rollei Projectors and Accessories the Rollei Universal

The Rollei Universal Projector accepts all slide sizes from sub-miniature to 2¼" by 2¼" The Universal has full remote control, motor drive focusing, forward and reverse, two magazine channels, a 300 watt lamp, a dual line-voltage range: 110-117v and 120-127v, 60 cycle AC. For projecting Rollei 16S slides, the 45mm lens and special condenser should be selected. The 110mm lens can be used for either 35mm or Super Slides. The 110-160 zoom lens can be used with all slide sizes, as can all of the lenses from 150mm on up to 400mm.

Cat. No.

The Rolleiscop

The Rolleiscop is a multiple format projector for subminiature to Super-slides. It features a sliding elevator arrangement that moves transparencies carefully from the magazine into the image plane. Continuous slide shows with as few as 5 slides or as many as 72 may be presented with the Rolleiscop.

Weight: 14 lbs., 14 oz.

Voltage: 110 volts, 60 cycles.

HONEYWELL PHOTOGRAPHIC PRODUCTS

Rollei P35A and P35

The Rollei P35A and P35 projectors are compact and functional units. Both models measure a scant 10" x 9" x 4½" The P35A weighs but 10 lbs. and the P35 9½ lbs. The P35A has completely automatic operation with remote control. The more economical P35 operates manually. Each uses a 150 Watt 24 volt quartz iodine lamp for cool operation, brilliant colors, and long life. The freely accessible slide tray allows easy changing or switching of slides. Slides in 2x2 inch mounts from subminiature to 35mm and instamatic formats may be used.

ROLLEI 2 1/4 x 2 1/4"
 its assets - and yours!

R3006 Rollei 2 1/4" x 2 1/4" Booklet

The advantages of the large format and the traditionally fine Rollei performance are thoroughly discussed in this four-color 20-page, illustrated booklet, 8 1/4" x 5 7/8"

Rolleiflex T

The lens of the Rolleiflex T is the world-famous Carl Zeiss Tessar for outstanding quality. The focus is adjustable with an optical indicator. The meter gives immediate response to light changes and up to the maximum range to show the correct exposure value. But you can also use the necessary meter in any time later on. Incidentally, this is a simple matter which your photo dealer will also be glad to do for you!

Be sure to get a Rollei camera with high-quality lens, simple and convenient operation and plenty of scope with accessories.

R3008 Rolleiflex T Leaflet

Lists the features and specifications of this economy model. Two-color 2 pages, 5 3/4" x 8 1/2"

You are no doubt familiar with the idea of the Rollei system. Rolleiflex T (Tessar lens) \$90.011

Rolleicord Vb

With the versatile Rollei you have five picture formats in one camera - up to full size for standard use. That means greater scope, more flexibility and no problem of picture size. That is what makes the Rolleicord Vb so popular.

It is also a Rollei in an amazingly low price - a further point in favor of the Rolleicord Vb. You find that the Rollei dealer has saved it of any time later on - for instance with the Rolleicord. The accessory exposure meter combined with a lens hood.

WE FEATURE ROLLEIFLEX
the standard in twin-lens reflex cameras!

Rolleiflex
Over the years, more prize-winning pictures have been made with the Rolleiflex than any other camera. And no wonder—only the famous Rolleiflex from Honeywell offers the convenience of a large (2 3/8" x 2 1/4") negative, plus the compactness and ease of operation found in smaller cameras. The Rolleiflex is the standard camera for many of the world's leading professional photographers, yet it's a camera with which an amateur can achieve remarkable results.

The widest selection of Rolleiflex models in years is awaiting your inspection. One is certain to be the right camera for you, so please visit us soon!

We have it--the world's smallest 35mm camera!
Rollei 35
from Honeywell.

Not much bigger than a pack of cigarettes, the great little Rollei 35 fits pocket or purse, yet it takes full-sized 35mm pictures! You'll carry it everywhere, bringing back razor-sharp, full-frame color slides or magnificent prints. Precision-built in the famous

Rollei tradition of quality, the 35 boasts such big-camera features as a superb Zeiss Tessar lens, a highly accurate Gossen exposure meter, and nine shutter speeds to 1/500 second. Come in for a demonstration of the Rollei 35 soon! It's a lot of camera for just \$000.00.
