

from Nikon...a new, streamlined, fully automatic 35mm SLR

NIKKOREX AUTO-35

with 48mm Auto-Nikkor f2 lens

Before you've even gone through half of the features of the Nikkorex Auto-35, you begin to realize that this is not just a camera, but a complete, compact system of photography whose versatility belies its modest price.

To start with, the Auto-35 has a fully automatic electric eye which provides fully automatic exposure control. Only the shutter speed need be selected. The aperture sets itself. Exposure can also be set manually. The correct aperture is visible in the finder, as are the over- and under-exposure limits.

Furthermore, the Auto-35 is equipped with an f2 Nikkor lens, combining high resolution with high

speed. And the quality of this lens is available to you for wide-angle photography and telephotography, as well. The simple addition of one accessory attachment converts it into a 35mm wide angle. Another converts it into an 85mm telephoto.

The lens has an automatic reopen diaphragm, and the camera, an automatic return mirror. Other features include recessed single-stroke advance lever, pop-up rewind crank, auto-reset exposure counter, prism finder, split-image rangefinder, and many others, all making the Auto-35 a fast, easy camera to handle. And it boasts a complement of accessories that fit it for almost every application.

NIKKOREX AUTO-35

ACCESSORIES

35mm f4 NIKKOR WIDE-ANGLE CONVERSION LENS Cat. No. 10252. Screws into 48mm camera lens. Provides 63° angle of view and increased depth-of-field. Automatic diaphragm remains operative. Supplied with lens caps and leather case.
