

# Compass

is more than a Camera

— it is a NEW

System of Photography

THIS —

AND THIS . . .

AND THIS...

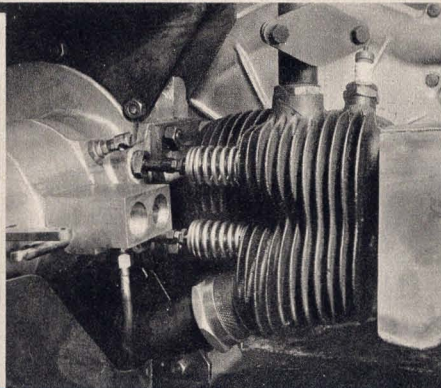

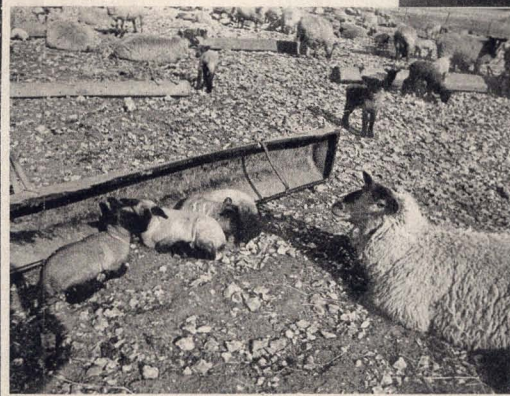

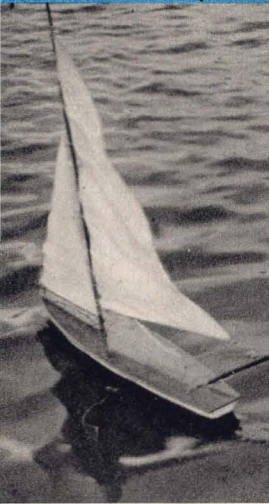

**THIS TOO . . .**

The very pictures you have always wished to take, in infinite variety, are now yours to produce as simply as adding 2 to 4, by the new Compass System of Photography—even if you have never handled a camera before.

PERFECT PHOTOGRAPHS—without experience—without technical knowledge. Because the simplified Compass System eliminates chance and uncertainty from every aspect of amateur photography.

In the Compass, for the first time, the skill and experience are built into the camera. The simplified linking of each of its technical features has made this the easiest camera in the world to use.

Study the different conditions under which these accompanying specimen photographs have been taken and then consider that the few necessary adjustments to suit each case are easily made by you from a simple numerical reading. The Compass Camera is a photographic system in itself, made to eliminate faulty judgment and to enable a good photograph to be taken without previous experience under most difficult conditions.

The whole field of photography is open to the fortunate possessor—snap shots, night scenes, interiors, portraits, speed subjects, colour scenes, air views.

Furthermore panoramic and stereoscopic photographs can be taken with no additional equipment, except a Compass pocket tripod, no larger than a fountain pen.

This miniature camera is about the size of a packet of twenty cigarettes; it can be comfortably carried in a lady's handbag or a gentleman's vest pocket, yet it embodies all the technical features that give you the widest range of photographic possibilities. When you have seen the Compass Camera you will realize that it can be your constant companion, because of its compactness and simplicity in use.

Your Compass dealer will be happy to demonstrate to you the simplicity of the working of the Compass System of Photography. The Compass Camera costs only £30.
