

WISTATWIN LENS

The Professional Photographer's Advantage

WISTATWIN LENS

FEATURES:

The Twin Lens camera was designed as a passport camera, but has the capacity to be both a portrait and reproduction camera. The standard twin lens/lensboard can be interchanged with a WISTA/Linhof lensboard and lens. The camera back will accept Polaroid backs, sheet film or any Graf-Loc-type rollfilm holder.

The WISTA Twin Lens features the fine craftsmanship of the WISTA camera body combined with the optics of Nikkon. The standard twin lens camera comes equipped with dual 130mm WISTAR Lenses mounted in a dual shutter and lensboard designed by WISTA. This lens system also has the capacity to be used on the full line of WISTA cameras.

The WISTA Twin Lens camera was designed to compete in the market currently being satisfied by the Polaroid passport camera. However, the focusing capacity of the WISTA Twin Lens camera combines to make it much more than just another passport camera.
