# WISTAFIELD 810

---

## FEATURES:

The Wista Field-810 is a large format camera designed for professional field work. As with all cameras in the Wista line, the needs of the professional are accessed and met. The purpose of the large format camera, the importance of precision movement and the portability factors create a combined challenge in design which has been met by the Wista Field-810.

The body of the Field-810 is constructed entirely of seasoned cherrywood to insure strength and limit any possibility of warping. The hardware is sturdy chromeplated brass with joining plates of natural brass. The seasoned hardwood and brass fittings combine to make the Field-810 not only strong but beautiful.

The Wista Field-810 is a finely crafted, handmade instrument which functions as a workhorse in the field. The Field-810 carefully blends the ideal format with portability, sophistication and durability to create the perfect field camera.
