

...gives you the speed you need...

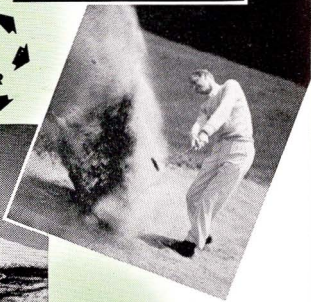

to "freeze" your action shots!

A new model of the Kodak Tourist Camera now opens up unprecedented picture-making scope for the folding-camera fan. Its new shutter hits a top speed of 1/800—a speed never before approached with a practical between-the-lens shutter. Its lens is the superb, four-element, Lumenized Kodak Anastar  $f/4.5$ . Think of the pictures that can now be yours—the fast action of sports "stopped cold"... by daylight... by "flash." Wonderful pictures in black-and-white or full color. See this camera at your first opportunity.

# Kodak Synchro-Rapid 800 Shutter

# ... a brilliant new feature of the popular Kodak TOURIST Camera ...

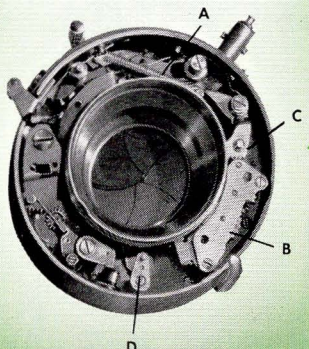

**NEW SCOPE**

• Ten speeds—from a dazzling 1/800 down to one full second . . . plus *bulb* for time exposures. Here is real scope in exposure control—from fast action to critical indoor shots at slow settings. And the built-in flash synchronization has time-delay settings for finer results with all the popular flash lamps and speedlamps.

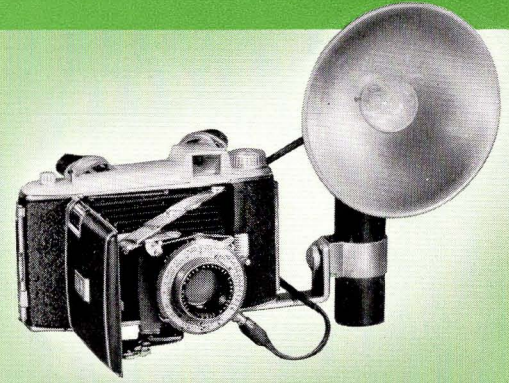

**NEW SPEED**

• This picture shows the five shutter blades—basis of the new shutter's high speed. Each blade is rotated about a fixed pivot as the shutter is tripped. Opening-and-closing cycle is made by one continuous movement. The result is a much faster shutter speed than is possible with the conventional reciprocating movement.

**NEW ACCURACY**

• The complete shutter mechanism is precisely designed to assure accuracy and uniformity at all speeds. Principal controls: The main spring (A) furnishes power for all speeds. The gear train (B) and retard mechanism (C) control the exposure for the slower speed settings. The high-speed spring (D) "boosts" the 1/800 speed.

*Finest Kodak folding camera*

Note these other features of the fifth and finest model in the Kodak Tourist Camera line:

**Lens**—Kodak Anastar *f*/4.5 . . . four elements . . . sharp-cutting, color-corrected, and Lumenized with anti-flare coating.

**Styling**—New streamlined beauty and balance . . . sturdy die-cast body . . . rigid struts and mounts.

**Operation**—Handy shutter release set into edge of folding front . . . enclosed, optical eye-level view finder . . . exposure computer built into camera back . . . built-in clip for Kodak Range Finder.

A camera you'd be proud to own. Price, \$95.00.

Kodak Flashholder . . . . . \$11.08

De Luxe Field Case . . . . . 10.00

Kodak Service Range Finder . . . . . 14.58

*Prices include Federal Tax where applicable*

## KODAK FILM...

Kodak Tourist Camera takes Kodak 620 Films—*Super-XX* for speed; *Plus-X* for fine grain; *Verichrome* for ortho results; *Infrared* for dramatic effects; *Kodacolor* for color snapshots; *Ektachrome* for home-processed color transparencies.

**and with the new Kodak Tourist Adapter Kit...** camera takes black-and-white Kodak 828 Films;

and *Kodachrome* 828 Film, leading to miniature color slides for projection and for Kodachrome Prints and Enlargements. Adapter Kit also equips camera for making split-frame negatives on Kodak 620 Films. Kit, \$14.50, including Federal Tax.
