

- The ProBack II invented by Marty Forscher, President of Professional Camera Repair, Inc., is smaller and lighter than Proback I and is designed specifically for Olympus OM, Canon A, Canon F1 (old and new style), Nikon F,F2,F3,FM,FE, and Leica R4 cameras. Special models of the ProBack II may be made to fit other 35mm cameras. Please contact NPC Photo Division for further information.
- ProBack II instantly produces clear, sharp Polaroid images with no discernible light loss. The ProBack does for 35mm photography what the Polaroid back did for large format photography years ago. It gives you the answer to exposure, lighting, lens choice and composition questions before the final image is shot. The ProBack produces two independent images per Polaroid frame, each image is 24mm X 36mm.
- The Proback chassis is made of precision-machined, anodized aluminum and has a free floating optic to ensure maximum sharpness.
- The ProBack can be attached and removed from your camera without disturbing critical camera-tripod alignment. The ProBack comes with a removable tripod adapter.
- The ProBack accepts all types of Polaroid peel-a-part pack film (611,665,667,668,669).

• **Price on the ProBack II is \$600.00** •
