

SOUND BARNEY

Canon 16M

This is the new SOUND BARNEY for the Canon Scoopic 16M Camera. It now provides you with more sound footage capabilities than you have ever experienced with the Scoopic Camera. To be compatible with the new Crystal Control unit that was just introduced, we have installed an access door on the side.

This is both the first, and only Sound Barney that has been designed for use with the new Canon Crystal control unit. The outside covering is manufactured from a heavy Naugahyde, and the foam inside is of a high density type. The Barney effectively reduces the operational sound to a level suitable for sound recording.

In cold weather, the Barney also provides adequate protection against freezing.
