

Mitchell 205-R 35mm silent studio camera

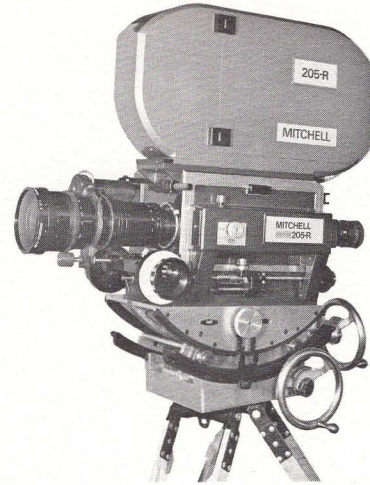

The Mitchell 205-R is a new, modernly-styled, compact sound stage camera designed around the well-known BNC movement that has been the work horse of the Motion Picture Industry for over 35 years. A 205 degree shutter has been added for those low light level shots and allows the cinematographer to take full advantage of the high A.S.A. films and fast lenses.

Is it quiet? You can count on it and no lens housings are required to get in the way of the assistant.

A brilliant viewing system is achieved by use of the latest technology in optical coatings and fast lenses. Lightweight magnesium castings have been used to keep the complete camera weight to 96 pounds, including the Mitchell Crystal Regulated Variable Speed Motor.

All of the little conveniences have been included such as fast action over center and magnetic latches, large adjustable marking scales on the follow focus, oversize eyepiece and anamorphic correction in the viewing system. Last, but not least, is an eye-appealing two tone metallic grey smooth finish paint job.

Team this beautiful new camera with the highest quality prime and variable prime lenses shown in the accessory list or the new Todd-AO anamorphic lenses and you can have your own winner!

PRICE LIST

Model/ Part No.	Unit Price	Model/ Part No.	Unit Price
Mitchell 205R 35mm Lightweight, silent sound stage camera, 205° variable shutter, straight thru F2.2 rotary mirror reflex viewing system, neutral density contrast viewing filters, high-low critical focus magnifier, marking slates for follow-focus and shutter settings, high-styling with two-tone grey paint, easy operating over center latches and magnetic closures, motor housing for 220 volt synchronous motor.
