

Super Wide Low Angle Prism

For 16mm, Super 16mm, and 35mm Cameras

THE LOW DOWN

In the past, when the script called for a super low-angle shot—of a high heel, a tire, or even a ground ball—the crew had two choices: dig a hole, or raise the set. Today cinematographers have discovered there's an easy way to get that ultra-low, wide angle viewpoint. Century's Super Wide Low Angle Prism will take you down to a point of view 2.5" off the floor. Plus, the unit is fully compatible with lenses as wide as 16mm.

When the situation calls for an extremely high angle such as shooting over the driver's shoulder in a car, down off a ceiling, or from the canopy of a cockpit, the Low Angle Prism may also be the perfect solution. The unit simply inverts to cover high angle shots as well as low.

SUPER WIDE ANGLE

Century's Super Wide Low Angle Prism provides the widest view of any prism on the market. Lenses up to 5" (127mm) in diameter may be installed directly behind the prism (without filters) for the widest view possible. The system is ideal for shooting with the Zeiss 16mm at Academy aperture or the 18mm at full aperture.

IDEAL INTERFACE

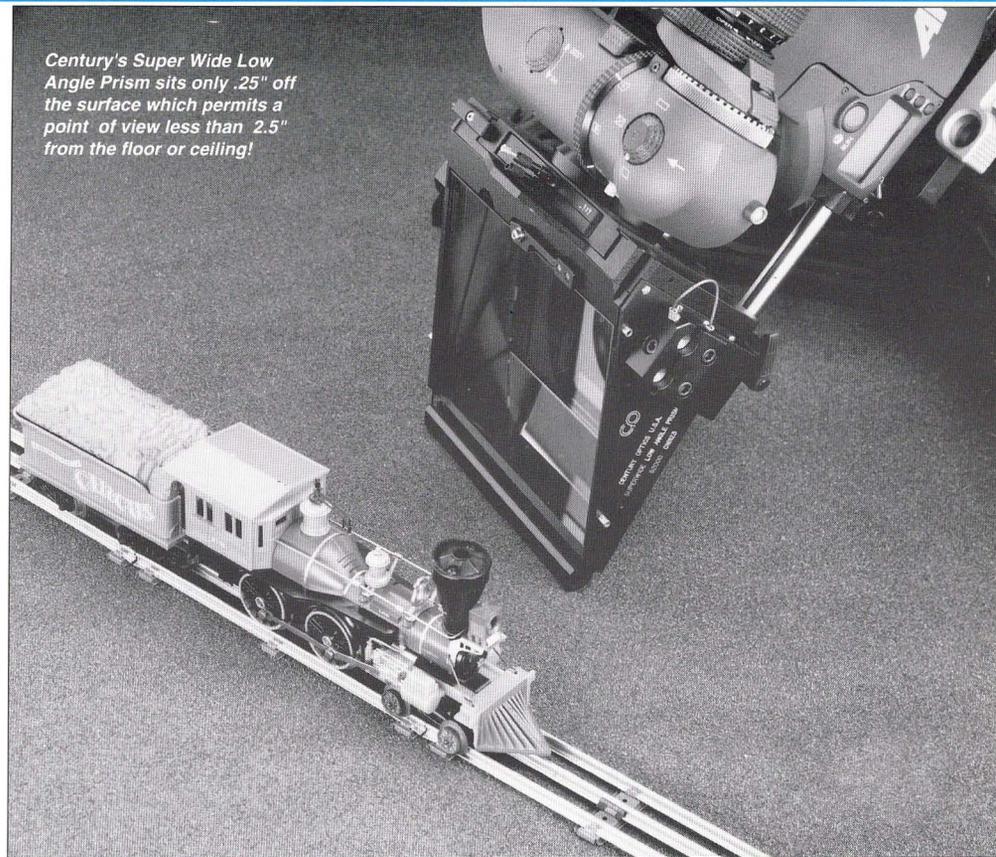

The Low Angle Prism directly couples with Arri and Panavision bridgeplate rods for rock-solid positioning of Zeiss primes or Panavision Primos™. Custom interfaces for other cameras are also available.

Easy access dual filter slots.

FILTER HOLDERS

Century's prism features two slots to accommodate Panavision 4" x 5.65" filters behind the unit. An adapter provides for the use of two 4"x4" filters in standard or Chrosziel holders. The user should be aware that installing two behind-the-lens filters increases the distance between the back of the prism and lens by 3/4" (19mm) which may limit the coverage of certain wide angle lenses.

Century's Super Wide Low Angle Prism sits only .25" off the surface which permits a point of view less than 2.5" from the floor or ceiling!

QUALITY PERFORMANCE

The Low Angle Prism not only solves a logistics problem, but is a superior quality optical system, as well. The hand-crafted unit features specially coated high-density glass elements to minimize light loss. Images are crisp, clear and distortion-free.

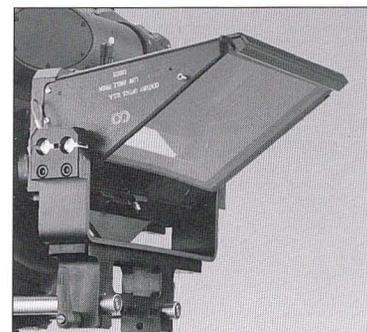

THE PACKAGE

The Super Wide Low Angle Prism comes complete with a 6.6" x 7.6" clear protective front filter. The package also includes front and rear lens covers and a sturdy aluminum/fiber-glass transit case.

FEATURES

- Widest Low Angle Prism available.
- Point of view as low as 2.5" (6.35cm).
- Specially coated high-density glass.
- Precision construction.
- Housing includes holder for 2 each 4" x 4" filter holders.
- Less than 1/2 stop light loss.
- Dimensions: 7 1/2" L x 9 3/4" W x 6" H (190mm x 250mm x 150mm)
- Weight: 15.5 lbs. (7kg.)

All Century Precision products feature an unconditional 30-day money-back guarantee.

Century's Super Wide Low Angle Prism inverts for high angle shots or when working in tight quarters.
