

Century's 150-600mm Lightweight Canon Lens Conversion

For Video and 16/35mm
Cinematography

Lightweight version of Century Precision's award-winning 150-600mm Canon lens conversion.

Century Precision Optics offers a second version of their popular 150-600mm F5.6L Canon lens conversion. Ideal for use in wildlife cinematography, documentary work, or whenever weight is critical, the new lighter-weight lens features many advantages of the ever-popular award-winning Series 2000 conversion, at a lower price.

Century has extensively re-engineered Canon's renowned variable prime from the inside out, and converted it to a true zoom which accurately holds focus and eliminates image movement.

Weighing under 12 lbs.,

the lens features a new aluminum alloy housing which makes conventional zooming possible. Lens markings are large, bright and read clearly. Knobs and rings are easy to access and human-engineered. Integral gears, motor mount and support are designed to directly interface today's cameras.

The Century/Canon also includes a holder for (2) 40.5mm filters. The lens also features Century's Interchangeable Mount System* for compatibility with popular 16mm, Super 16/35mm film as well as video cameras.
