

# Century 9.8mm Kinoptik Revitalization

**Century's extensive modification makes your existing 9.8mm T2.3 Kinoptik lens fully compatible with today's cameras and accessories.**

#### Extensive Evaluation & Optical Care.

Prior to modification, each lens undergoes extensive optical evaluation. Then it's expertly disassembled and thoroughly cleaned.

#### New Focusing Mount & Aluminum Housing.

To assure ultra-smooth focusing, the optics are equipped with a new multiple lead, non-rotating, hard brass and aluminum focusing mount and fitted in our new custom aluminum alloy housing.

#### Focuses to 1".

For optimum close-up work, the new conversion lets you focus to 1" from the front of the lens (8" from the film plane).

#### Integral Follow Focus Gear.

The new integral focus gear offers compatibility with today's popular follow focus systems.

#### Large, Clear Engravings.

The large, easy-to-read, yellow engravings let the operator easily identify footage marks and the new T-stop markings.

#### Choice of Mounts.

Arri PL or BNCR (for Moviecam and Arri hard-fronts), we'll add a new stainless steel mount to go with your choice of cameras.

#### Utilize Existing Accessories.

Don't worry about your existing accessories. Once your lens is converted, the front diameter remains the same size. And the updated lens still accepts 2" x 2" glass filters.

#### Features:

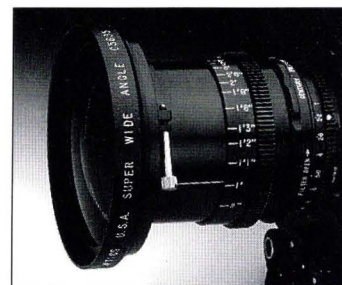

- Mount: Arri PL or BNCR stainless steel.
- Focus Ring: Large geared ring, compatible with Arri follow-focus system. With easy-to-read footage scales.
- Iris Ring: Geared for easy hand or automatic motor control.
- Scales in large clear engravings.
- The converted Kinoptik retains the same front diameter as the original lens.
- Rear Filter holder for 2" x 2" glass filters.
- Optional .7x Wide Angle attachment converts lens to 6.8mm.

#### Specifications:

MOD from front element	1"
MOD from Film Plane	8"
Max. Aperture	T2.3
Min. Aperture	22

#### Update Conversion or New Lens.
