Century Precision Tilt-Focus Lenses

Angle your camera's plane of focus to match your subject with Tilt-Focus lenses from Century Precision. The 24mm (T4), 45mm (T2.8), and 90mm (T2.8) Century Tilt-Focus lenses each provide 360° of rotation and 8° of tilt in any direction, offering remarkable control of the subject focus plane in 16mm, Super 16, and 35mm cinematography.

For 35mm, 16mm & Super 16
Cinematography.

View Camera-Style Tilts.

By tilting the lens, the operator effectively tilts the plane of focus, bringing more of the subject into focus or, conversely, excluding unwanted objects. Tilting the lens down, for example, can align the plane of focus with a horizontal subject—a field of wildflowers or plates of food on a table—achieving extreme depth of field without stopping down.

Century's Tilt-Focus Lenses also provide an ideal way to isolate the subject from its surroundings. By rotating the lens 45° and tilting it left or right, for instance, the cinematographer can focus on one member of crowd, even if others in the frame are the same distance from the lens.

Precise Controls.

The lenses' tilt and rotation adjustments can be made before or even during a shot, for a wide variety of effects. The desired degree of rotation is fixed via a lever, while a locking knob secures the selected tilt angle.

Complete Compatibility.

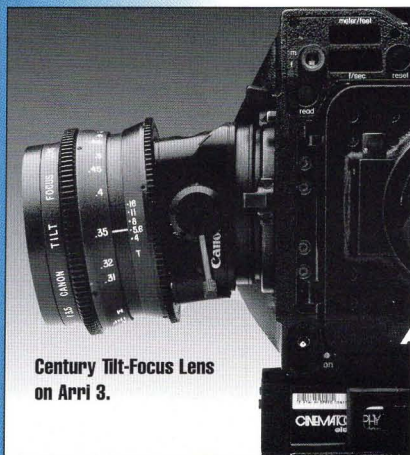

Radically modified from Canon still lenses originally developed for the EOS system, Century Tilt-Focus lenses come in Arri PL, Arri B, and Aaton mounts. They are equipped with standard 80mm lens fronts to fit a wide variety of popular accessories. All three lenses feature linear iris and integral .8 module metric iris and focus gears.

Features:

- 360° rotation.
- Advanced Canon optics.
- Linear Iris.
- Standard 80mm lens front.
- .8 module metric iris & focus gears.
- Available in Arri PL, Arri B, or Aaton Mounts.
