GIVES

SMOOTHNESS ONLY FOUND IN A MILLER HEAD

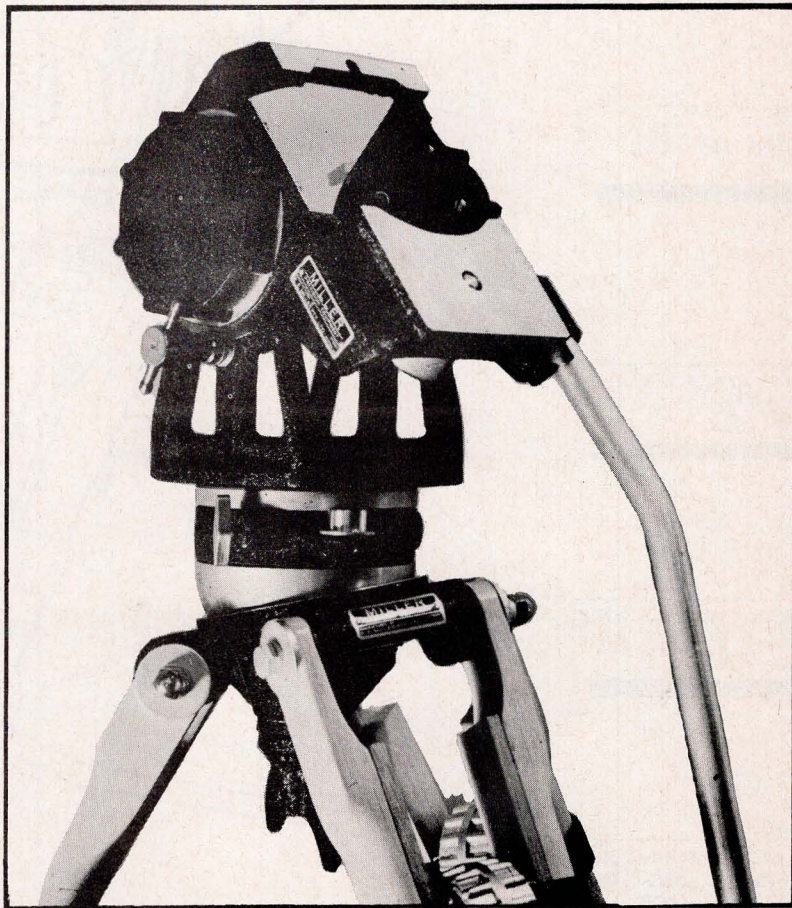

- Complete control for smoother operation in both horizontal and vertical movement.
- No shake or jitter.
- Full 360° horizontal movement.
- No backlash.
- Interchangeable with Pro. Jr. S.O.S. and similar tripods without ball top.
- Optional converter plate available to suit conventional cameras.
- **WHATEVER CAMERA** you use — you will get better results with a **MILLER HEAD**.

THE MILLER "Fluid Action" HEAD

is designed for use with motion picture cameras, telescopes and similar mechanical, optical or electronic equipment, where smooth panning and tilting movements are essential. This movement operates on a semi-hydraulic principle which is patented throughout the world, and should not be confused with any friction-type movement.

The Head consists of three sealed units which are packed with a special fluid and sealed at the factory. Under no circumstances should oil or other fluids be used in the unit as this will destroy the effectiveness of the movement. If the Head should cease to operate smoothly it should be returned to the distributor for service. Unless otherwise specified the movements are packed with a medium grade fluid which permits the Head to operate efficiently throughout a moderate temperature range.
