

Improved Folding Kodaks.

(Model of 1893.)

NEW FOLDING KODAKS.

Several new and important features have been embodied in the Folding Kodaks.

Shutters. The Folding Kodaks are now fitted with the Bausch & Lomb Iris Diaphragm Shutter which are furnished with pneumatic release, including rubber tube and bulb, without additional charge. The range of automatic exposure is from 1-100 of a second to three seconds. Hand exposures are made by pressing the bulb to open and again pressing it to close the shutter. The diaphragm is regulated by simply turning a dial. The shutter can be used with or without bulb.

The Lens is longer focus than formerly and covers the plate fully, even when the front is raised ; it is instantly removable and can be replaced by a wide angle lens, the cells of which fit into the same shutter. In the No. 5 and No. 6 Kodaks the lens board can be easily removed and stereoscopic lenses substituted. An extra lens board and partition for use with stereoscopic lenses are furnished with each of these Kodaks without additional charge. A convenient pocket is provided within all of the Folding Kodaks for carrying extra lenses.

A Double Swing Back and sliding front are among the other improvements. These Kodaks can be focused either with the index or on the ground glass, the roll holder having a dark slide and being as easy to remove as an ordinary plate holder. A hinge in the bed allows the front to drop when the wide angle lens is in use.

A convenient locking device prevents the front of the Kodak from being opened and tampered with.

The No. 5 and No. 6 Kodaks are also provided with focusing levers for fine focusing with either the Universal or wide angle lenses.

Folding Kodaks are self contained when closed and are provided with a Bausch & Lomb Universal Lens, reversible finder, socket for tripod screw, counter for exposures, ground glass for focusing, and attachment for glass plates.

Improved No. 4 Folding Kodak. For 4 x 5 pictures ; capacity 100 exposures without reloading.

Price, complete with Bausch & Lomb Universal	
Lens, loaded with spool of 48 exposures, -	\$60 00

Stereoscopic Lenses (extra),	14 00
Stereoscopic Shutter (extra),	18 50

FOR USE WITH GLASS PLATES.

Glass plates can be used in the New Folding Kodaks without an adapter, as the roll holder is interchangeable with our plate holders. Four double holders can be carried in the case in the space occupied by the roll holder.

Prices of Holders and Cases.
