

Latest automatic member of world's foremost TLR system adds further versatility and handling ease

MAMIYA C330

The C330 offers all the traditional Mamiya features that have revolutionized TLR photography: complete interchangeability of lenses and finders, built-in closeup facilities and rugged, professional dependability. It also retains the automatic controls that made its predecessor one of the fastest-handling TLR's available.

In addition, the C330 embodies important new advantages. Interchangeable finder screens. Use of 220 as well as 120 film without changing backs. Improved film/shutter transport and focusing scales. Yet the C330 weighs a full 10 ounces less than its forerunner.

Backed by the wide-ranging Mamiya system of lenses and accessories, the C330 provides capabilities never before available to the TLR photographer.

FEATURE

HIGHLIGHTS OF THE MAMIYA C330

1. Interchangeable lenses C330 accepts all 7 lenses in the Mamiya system, from 55mm to 250mm; each in M-X synchro shutter with speeds from 1 second to 1/500th. Lenses may be switched at any time, even in mid-roll, without risk of fogging film (automatic light-tight shield protects film during lens change).

2. Interchangeable finders Self-erecting hood, with built-in magnifier and convertible into open-frame sportsfinder, interchanges with accessory eyelevel finders and magnifying hood.

3. Interchangeable finder screens Standard Fresnel-type screen, with matte spot, interchanges easily with any of 5 others to suit any preference or special application.

4. Improved automatic transport crank advances film and cocks shutter with one 360° forward swing; no back stroke required. Automatic double exposure prevention can be disengaged to permit intentional multiple exposures.

5. Automatic parallax compensation indicates progressive change in picture area right on the viewing screen as camera is focused at different distances; operates with all lenses.

6. Automatic exposure factor indicator shows exposure increase required for closeups and copying directly on viewing screen; applicable to all lenses.

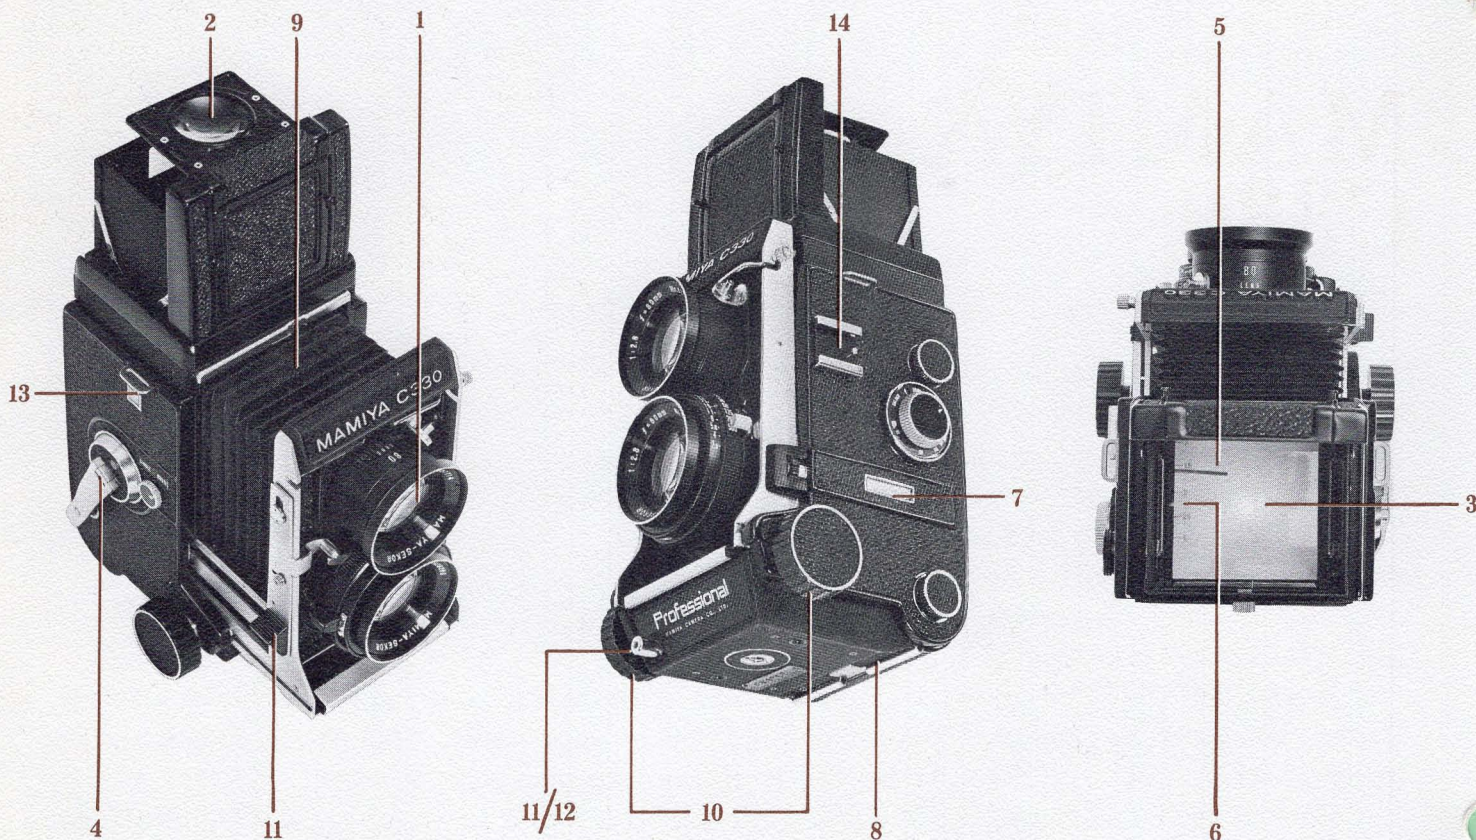

7. Unique distance scale Newly designed hexagon scale for 7 lenses rotates for selection of scale to match lens in use.

8. 120/220 rollfilm capacity Simply rotate pressure plate for film used. This also, automatically, presets counter for corresponding number of exposures, (12, or 24, respectively). Back interchanges with accessory adapter for sheet film/plate holders.

OTHER MAMIYA C330 FEATURES:

9. long extension bellows for closeups without special accessories (as close as 3" with 55mm lens) **10.** dual focusing knobs **11.** improved, dual body shutter release **12.** cable release socket **13.** auto-reset exposure counter **14.** accessory shoe.

C330 accepts all Mamiya TLR accessories except the previous sheet film adapter and the 220 rollfilm back. See separate sheet for details.
