features

## MAMIYA C33

Lens interchangeability was without doubt the most important single advance in twin-lens reflex design. In making it possible, Mamiya provided the twin-lens reflex with new versatility, and brought new impetus to its development as a major photographic medium. The new Mamiya C33 represents another giant step forward. Combining new automatic controls, new features and facilities, it is the most advanced twin-lens reflex ever produced.

MAMIYA C33 (less lens), \$195; with 80mm f2.8, **\$289.50**

## FEATURE

HIGHLIGHTS OF THE NEW MAMIYA C33

**1. Automatic transport crank** advances film and cocks shutter in one rapid operation; prevents accidental double exposure; operates with all lenses.

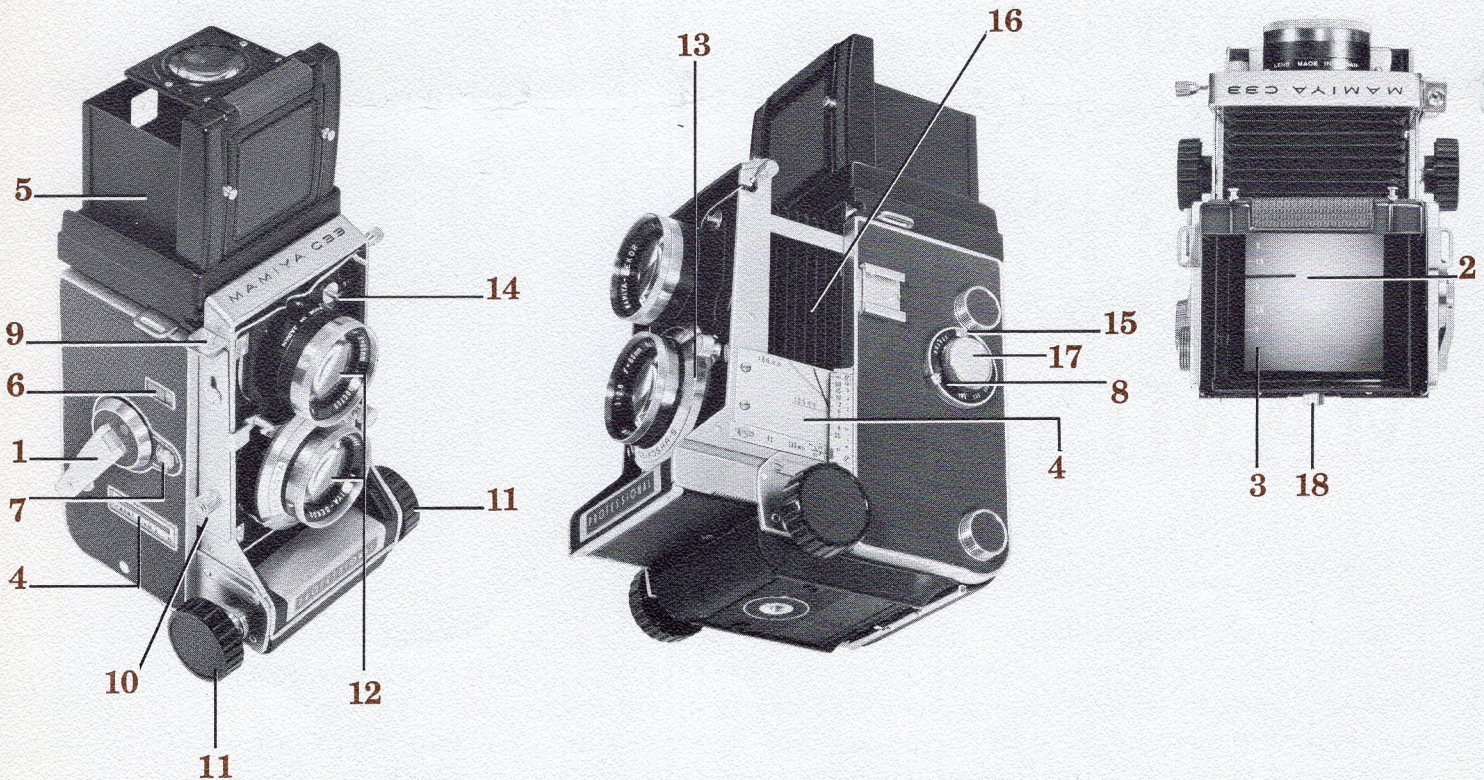

**2. Automatic parallax compensation** indicates progressive change in picture area right on the viewing screen as camera is focused at different distances; operates with all lenses.

**3. Automatic exposure factor indicator** shows exposure increase required for closeups and copying directly on viewing screen; applicable to all lenses.

**4. Improved distance scales** simplified scale for 105, 135 and 180mm lenses; new, expanded, quick-reading scale for 65 and 80mm lenses.

### Plus these traditional Mamiya features:

**5.** removable viewing hood with magnifier and open-frame sportsfinder **6.** auto-reset exposure counter **7.** provision for intentional double exposure **8.** lens selector for parallax compensation **9.** cable release socket; **10.** body shutter release; **11.** dual focusing knobs **12.** matched viewing & taking lens set **13.** M-X synchro shutter to 1/500th sec. **14.** standard PC flash terminal **15.** film speed indicator, ASA 10-1000 **16.** long extension bellows permit close focusing (to 4" with 65mm lens) without accessories **17.** lens lock and safety control **18.** release for removing roll film back and switching to adapter for sheet-film/plate holders.

### LENS INTERCHANGEABILITY

The C33 accepts all 5 interchangeable lenses in the Mamiya system: 65mm f3.5 wide angle, 80mm f2.8 short focus, 105mm f3.5 normal focus, 135mm f4.5 long focus, and 180mm f4.5 telephoto, each in M-X synchro shutter with speeds from 1 second to 1/500th.

NOTE: Special 180mm lens for C33

### ACCESSORIES

The new Mamiya C33 accepts the same accessories as the Mamiya C2, C22 and C3: Porroflex eye-level finder, grip handle, adapter back for sheet film/plate holders, Paramender, sports finder masks, lens hoods, filters, and cases.
