

TOPCON SUPER ID_M

MOTORIZED AUTO-WINDING,
MAKES THINGS FASTER AND EASIER.

You're always ready, for the decisive moment...

Because the motorized Auto Winder prepares everything for the next shot 1/2 second after you lift your finger from the shutter release button. And, it lets you keep your eye glued to the finder eyepiece, following up your subject, even during auto-winding action. In other words, you're always ready for the decisive moment because the Auto Winder takes care of everything automatically. (Detachable for manual operations.)

The new CC (Control Center) Pentaprism Finder also helps by showing the actual aperture setting on the

ring, plus exposure indicator with visual over- and under-exposure adjustments and a fast split-image range-finder spot, for speedy centralized shooting controls. (Exchangeable with waist-level finders.)

Finally, the newly-developed multi-coated 50mm f/1.4 RE GN Topcor M lens automatically sets the f/stop for the distance focused, by simply locking the guide number (GN) into the lens. Flash-Matic operation means speedier shooting in flash photography, without flash calculations, too.

Plenty of time-proven quality features, because...

The new TOPCON Super DM retains all those good features that we gave you in the TOPCON Super D and the RE Super cameras.

Finder and focusing screen are easily exchanged. A top deck exposure indicator takes over automatically when waist-level finders are attached and also has over- and under-exposure adjustments. Camera back is detachable for using bulk film magazines. Built-in motor drive shaft only requires connection of the electric motor drive, without special body modifications. Spring-loaded preview lever shows the actual depth of field in the finder. And, the mirror can also be locked up.

But, on top of all these wonderful, time-proven features, the original Thru-The-Lens Mirror-Meter System continues as the ultimate system for exposure-perfection. It's the only system that works on shutter-priority or aperture-priority, as you like, with possibilities for personalized adjustments. In fact, it's the only system designed to satisfy your exacting requirements, not only now but in the future, when they may be even more exacting.

TOPCON Thru-The-Lens Mirror-Meter System

TOKYO KOGAKU KIKAI K.K.
(TOKYO OPTICAL CO., LTD.)

75-1, Hasunuma-cho, Itabashi-ku, Tokyo 174, Japan

Born with a complete system of photography...

And, it's a system so extensive and versatile that you will never be able to outgrow it.

Top quality TOPCON lenses include 16 general purpose lenses, from super wide-angle 20mm to telephoto 500mm, including zoom, plus four special macro lenses for close-up work. And, the standard f/1.4 lens is multilayer anti-reflection coated for improved light transmission and reduction of contrast-killing flare.

TOPCON lenses have always been synonymous with the finest in optical quality and the complete range of lenses available for the Super DM carry on in the same tradition.

Versatile TOPCON accessories are available for all types of photographic work.....or, close-ups, macrophotography, photomicrography, slide-copying, reproduction and motorized operations, with standards meeting the highest professional requirements. Included are two waist-level finders, with low and high magnifications; nine focusing screens; eyepiece adapter; angle view finder; magnifier; extension tube set; bellows; macro-stand attachment; automatic extension tube; slide-copying attachment; two microscope attachments, also for low and high magnifications; copying kit; complete electric motor drive system, including wireless transmitter and receiver set; incident light receptor; gray slide; meter-lite; three close-up attachment lenses; seven eyepiece correction lenses; flash gun; reverse-adapter ring; RE Auto-Ring, etc., etc.
