**T**O begin with, the fact that the **New York Herald** and other leading newspapers have their reporters equipped with **Expo Watch Cameras**, is proof conclusive that this camera wonder is highly practical and not a toy.

In addition to this, every camera is sold under a **positive guarantee**.

Think of a camera that weighs but three ounces, that looks exactly like and takes no more room in the vest pocket than an ordinary watch; that loads in daylight with film for 25 perfect little pictures,  $\frac{5}{8} \times \frac{7}{8}$ ; that has time and instantaneous shutter, and, in short, nearly everything a big and expensive camera has, except clumsiness, and you get some idea of the **Expo Watch Camera**.

Think of the many occasions presented to take a picture if one had a camera convenient, and a picture could be taken without attracting attention.

Now, the **Expo** is just as convenient, as a watch, which it resembles so closely that ninety-nine out of one hundred would think one were noting the time on ones watch, instead of taking an **Expo** picture.

At the Yacht Races at Put-in Bay, on July 26th, 1905, the Toledo, Ohio, Blade, one of the leading Ohio dailies, scored the biggest newspaper beat in its history with the aid of the **Expo**, and gave the matter a two column article in its issue of the same date.

To add to the practicability of the **Expo Watch Camera**, the **Expo Enlarger**, a new and novel contrivance, that will enlarge **Expo** pictures in the simplest possible manner up to 2 x 3 size, has been devised.
