## MARK III

4x5" • 5x7" • 8x10"

*THE ULTIMATE IN A VIEW CAMERA*  
*—EXTREMELY CLOSE-TOLERANCE ADJUSTMENTS—*  
*—OPERATIONAL WITH ONE HAND—*

Shown: 8x10" MARK III

The new de luxe Plaubel Profia view camera, the MARK III, has all the features and finest West German workmanship that made the MARK II so desirable. In addition, the MARK III is designed to provide camera movements with even closer tolerance than before. Further, the MARK III is operational with one hand.

Closer tolerance adjustments are made possible by the use of a rack-and-pinion design (with thumb lock) for vertical movements. The rack-and-pinion and spindle drives are built into front and rear standards,

with their controls on one side of the camera. All controls of the camera can be operated from one side, with one hand.

The Profia MARK III is produced in three formats: 4x5", 5x7", and 8x10".

The 4x5" MARK III has a 360° swing, 3.75" (95mm) rise, 1" (25mm) fall, 1.8/1.8" (45/45mm) shift and 35/35° tilt, with a click stop in zero position for swings, tilts and vertical movements. Front and rear standards have the identical range of movements.

The 5x7" and 8x10" MARK III cameras have a similar range of movements. All adjustments in the MARK III are made around the central axis.

The MARK III (all three formats) is supplied with the Plaubel 21.5" (550mm) 4-channel basic monorail, and camera lock knobs with multi-plate clutch. This combination assures smooth rail movement, exceptional camera rigidity, and, most important, vibration-free exposures. Extensions of the basic monorail can bring its length to over 60" (1530mm). A universal camera back with spring-loaded frame and grid lined groundglass is supplied with all MARK III cameras. The 4x5" back includes a fresnel lens.

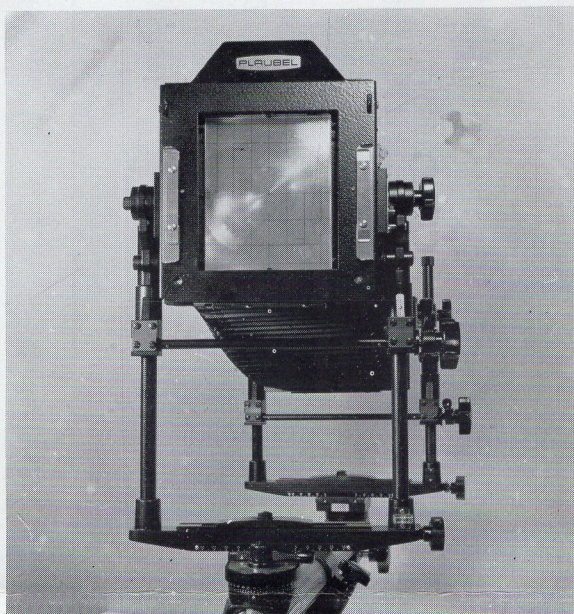

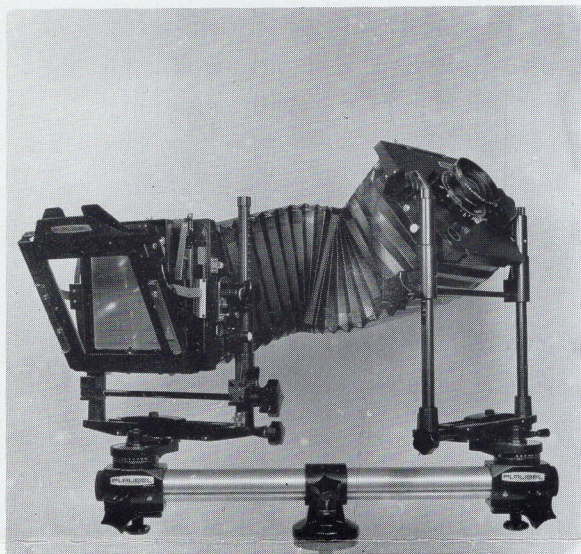

The MARK III is modular. The 4x5", 5x7" and 8x10" cameras have the same front standard, lensboard and monorail. To make a larger size camera into a smaller one, only two accessories are necessary: an adapter frame and the smaller format camera back.

The Profia System includes a large variety of accessories to make the MARK III as versatile as the photographer desires. These include a reflex focusing hood (4x5" and 5x7"), lightmeter attachment for through-the-lens reading on the groundglass (4x5", 5x7" and 8x10", with full coverage in every size); also extension bellows, auxiliary standard, compendium with filter holder.....and more.

All MARK III cameras are constructed of heavy duty aluminum alloy, finished in Professional Matte Black. A written one year guarantee is supplied with each camera.

## GUARANTEE

Plaubel Profia MARK III cameras and accessories are guaranteed against defects in manufacturing for one year from date of purchase, under the terms of the Guarantee and Registration card supplied. The Guarantee applies to the original purchaser only.

Prices subject to change without notice.
