1145	**ARGUS/COSINA STL 1000 f/1.4 PROFESSIONAL BLACK** with case and hot shoe	AC 1145

DOUBLE THRU-THE-LENS CdS ELECTRIC EYE

The precise Argus/Cosina exposure meter system assures you of perfect exposures everytime. Light coming thru-the-lens is measured by the Argus/Cosina double Cds meter system just before it strikes the film. The match needle visible in the viewfinder is coupled to shutter speeds and diaphragm openings so that you set your perfect exposure automatically with a turn of your wrist. This meter system has a 25 to 1,600 ASA range. You also have manual exposure control and a battery-saving meter activating button.

SPOT FOCUSING

You get corner to corner bright display with the Fresnel ground glass viewfinder panel. The micro-split focusing spot gives you precise focusing of the most complex subjects. The viewfinder also gives you precise data on the correct exposure setting.

METAL COPAL SQUARE SHUTTER

The Argus/Cosina STL 1000 uses a metallic focal plane shutter to give you greater precision and reliability. You get shutter speeds from 1 second to 1/1,000th second, plus "B" for time exposures. It allows you to synch with flash at 1/125th of a second.

ALL THIS PLUS . . .

Precision features such as: instant-open fully automatic diaphragm, and manual depth of field preview . . . unique film-in-camera indicator . . . built-in self timer . . . M-X synch outlets on side of camera . . . instant return mirror . . . single stroke film advance . . . double exposure prevention with manual overide for special effects . . . film type reminder. It all adds up to give you "something more."
