INFORMATION SERVICE

HONEYWELL PENTAX SPOTMATIC MOTOR DRIVE

The Honeywell Pentax Motor Drive System features a versatile camera which operates electrically from either a battery or A.C. power source. Motorized capabilities are combined with the classic Pentax feel and dependability. Unusually trim and compact, this flexible system increases the user's photographic potential. Because the camera is always cocked and advanced, it helps capture those decisive moments, fleeting expressions and unexpected events that make outstanding pictures.

The camera is a special Spotmatic, designed to accept the motor drive unit. The Spotmatic Motor Drive Camera shares all the same features as the standard Spotmatic, and accepts the same accessories and fine Takumar lenses. It can be operated manually as a standard Spotmatic with or without the drive attached. With the unit attached, it is a self-contained (no cords), motorized camera ideally suited for rapid-sequence photography, news, continuous copying, and many other industrial and scientific applications.

HONEYWELL PENTAX SPOTMATIC
MOTOR DRIVE - SET 36

When set for consecutive operation, three frames per second are exposed with a choice of shutter speeds from 1/60 to 1/1000 second. Single exposures can also be made when wanted. They are taken as fast as the trigger is pulled at any shutter speed.

The camera will accept either 36 or 20 exposure 35mm cassettes, as well as a special 250-frame bulk film back; and it operates on a rechargeable nickel-cadmium battery, eight pen-light batteries, or A. C. In addition to counting frames, the exposure counter automatically shuts the motor off after the last frame is taken, preventing the motor from pulling the film out of the cassette.

Because of the differences in design, standard Spotmatic or other Pentax cameras cannot be modified for use with the Motor Drive.

The Pentax Spotmatic Motor Drive may be purchased as a set or as individual components, as listed on the following page.

If the camera and motor drive unit are purchased as separate items, it may be necessary to have an adjustment for proper operation. A lifetime warranty is offered to the original purchaser of the camera, providing for a no-charge fitting of the camera to the motor drive unit.
