CONTAREX, CONTAREX SPECIAL CAMERAS AND ACCESSORIES 35mm

THE CONTAREX CAMERA

The Contarex is the top-ranking Zeiss Ikon camera, a camera of distinction in performance as well as in appearance. It combines the features of two leading designs: the famous Contax with completely interchangeable lens mount and the unique Contaflex single-lens reflex camera. Needless to say, such a combination of two outstanding camera designs sets new standards in versatility, precision and convenience, and it lends prestige to its owner.

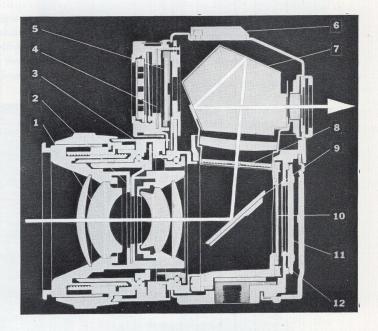

Contarex with major lenses and accessories

The Contarex camera is designed for the most rugged conditions, made of carefully selected materials and finished to utmost perfection. It is a piece of equipment_you will admire for its workmanship and dependability. Its versatility makes it the ideal tool for the advanced and discriminating photographer. With a complete set of lenses, you cover anything from 90 degree wide-angle pictures to amazing telephoto shots. Photomicrography, macro photography and copy work can be done with a few inexpensive accessories. There are indeed numerous applications for the Contarex in medical, industrial, news, studio and sports photography.

The unique single-lens reflex principle

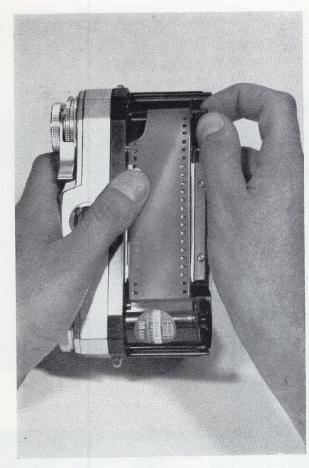

With a single-lens reflex camera you sight and focus through the camera lens, and it does not matter if it is a standard, wide-angle or telephoto lens. In addition, you can fit a supplementary close-up lens or any other attachments over the lens, and the viewfinder image will still be parallax corrected. You also retain the convenience of the built-in rangefinder, the most important advantage of the single-lens reflex camera over regular 35mm cameras. In the Contarex, this single-lens reflex principle has been brought to unsurpassed perfection.

CROSS SECTION OF CONTAREX

- 1. Planar f/2, 50mm lens.
- 2. Lens diaphragm.
- 3. Lens diaphragm coupling.
- 4. Exposure meter diaphragm.
- 5. Photoelectric cell.
- 6. Accessory shoe.
- 7. Penta Prism.

- 8. Fresnel lens with ground glass ring and split-image rangefinder.
- 9. Reflecting mirror.
- 10. Focal plane shutter.
- 11. Film.
- 12. Protective capping plate.

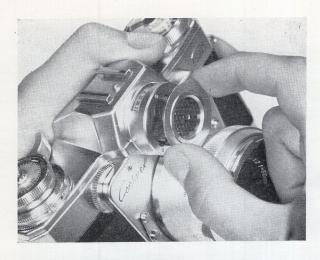

THE CAMERA BODY

A strong, die-cast body, from a light metal alloy, makes Contarex impervious to all kinds of climatic conditions. Outside metal parts are black anodized or satin chrome finished for greater durability. The camera body is handsomely covered with fine morocco leather. For fast loading and easy cleaning, the camera back is completely removable. The Contarex without lens weighs 32 ounces and measures $2\frac{1}{2} \times 4 \times 6$ ", a truly compact, well proportioned and perfectly balanced camera.

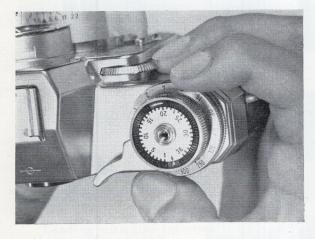

VIEWFINDER AND RANGEFINDER

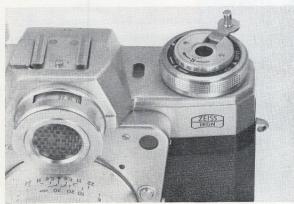

A large parallax-corrected eye-level viewfinder provides an extra bright natural-size image, always sharp to the edges for instantaneous compositions. You see and focus through the lens, wide open. It also features an instant-return mirror which returns to viewing position after each exposure. The Penta roof-type prism makes the subject appear upright and unreversed, which is an essential point in sports photography and various other fields. The Fresnel lens guarantees an amazing overall brightness which is a necessity for available light photography. Simultaneously with viewing the subject, you focus the lens on either the split-image field or the surrounding extra fine focusing screen. This combined view and rangefinder is ideal for full-frame compositions of action shots. At the same time, you have complete control over the built-in exposure meter as the indicating needle is placed adjacent to the viewfinder image.

EXPOSURE METER

Zeiss Ikon exposure meters have proved to be most reliable for over 25 years, and the Contarex meter is, indeed, outstanding in performance as well as in its special features. Built into the camera for protection and for greater convenience, this exposure meter couples to all interchangeable lenses with automatic preset diaphragms (35mm to 135mm). The ingenious interlock system gives the choice of pre-selecting either a shutter speed or a lens opening, and the other setting is then adjusted with the exposure meter. Most other single-lens, reflex cameras do not provide this alternative, and with these designs, the shutter speed must be preselected at all times. The Contarex exposure meter also permits conventional shutter speed and f/stop settings for non-preset lenses (21mm and 250mm). Furthermore, the automatic interlock can be temporarily disengaged to use individual settings for deliberate under or over-exposures (green dot setting). There are provisions for reflected and incident light readings.

To increase the sensitivity of this exposure meter under poor lighting conditions, simply remove the light baffle in front of the photocell, and the exposure meter will be 16x more sensitive than under ordinary conditions. This is equivalent to four full lens stops (yellow dot setting). The exposure meter can be adjusted at waist level or eye level. The indicating needle is adjacent to the viewfinder image. The 35mm and 50mm lenses automatically compensate for the natural loss of light at near distances.

THE FOCAL PLANE SHUTTER

There are 12 shutter speed settings on a single dial, including B, J -1/1000 sec., and each speed operates with amazing smoothness. The built-in self-timer can be adjusted to various time delays, and the shutter is fully synchronized for flash bulbs and electronic flash units. Each speed is color coded and you adjust the synchronization automatically as you select a particular shutter speed.

COLOR CODE FOR FLASH SYNCHRONIZATION

Black speeds (X-contact) 1-1/30 sec: Class M bulbs, electronic flash units

Yellow speed (X-contact) 1/60 sec: Electronic flash units only

Red speeds (M-contact) 1/125-1/1000 sec: Focal plane (FP) flash bulbs

All speeds from 1-1/1000 sec. operate with the built-in self-timer for flash exposures.

RAPID FILM ADVANCE LEVER

One stroke with this lever advances film, cocks shutter, then opens lens diaphragm for viewing.

RAPID REWIND CRANK

A collapsible crank permits fast rewinding of 20 or 36 exposure loads into the cartridge.

PHOTOMICROGRAPHY

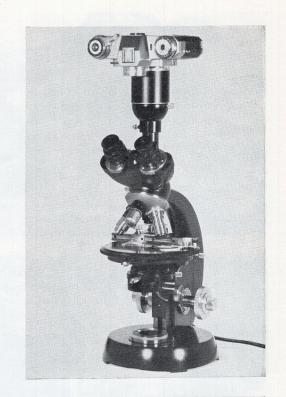

A few inexpensive adapters connect the Contarex without lens to standard microscopes with 25mm diameter eye-piece sleeve. The built-in viewfinder is parallax corrected for this purpose and the circular focusing screen indicates when the microscope is adjusted for maximum definition. As an additional accessory, we suggest the right-angle viewfinder.

TABLE REPRODUCTION STAND

The table reproduction stand clamps to tables or drawing boards for all kinds of copy work and table-top photography. The camera can be aligned vertically and horizontally or at any intermediate position. The 24-inch pillar permits copy work of 10×15 " documents or any smaller sizes. When copying material is larger than 10×15 ", swing the camera out and place the documents on an adjoining lower table or directly on the floor.

FOCUSING BELLOWS ATTACHMENT

If the interchangeable Contarex lenses do not provide sufficient magnification at near distances, the focusing bellows attachment is recommended with its long bellows extension. This Contarex attachment covers minute objects in one sweep, and it is extremely flexible for medical and dental close-ups. The attachment can be used in conjunction with 35, 50, 85 and 135mm lenses. (Specifications are in price list.)

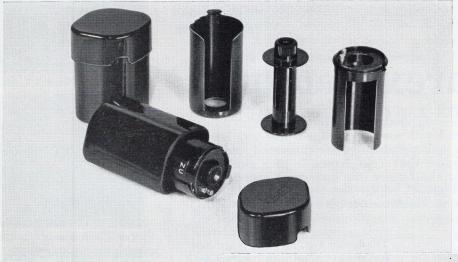

FILTERS

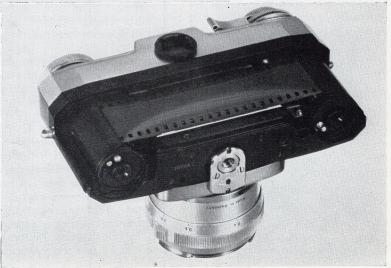

Filters and lens hoods are supplied in bayonet mounts for quick and convenient interchangeability. One size filter for all lenses from 21mm to 135mm focal length.

CASSETTES

Loading with two cassettes

Offers considerable advantages. It eliminates the necessity of rewinding exposed film, and partly exposed film can easily be removed in broad daylight. This facilitates exchange of one type of film for another, of black-and-white film for color, whenever such quick change is desired.

Contarex Lenses

FOR CONTAREX AND CONTAREX SPECIAL

The Contarex is equipped with some of the finest lenses as far as workmanship, material and performance are concerned and the fact that they are genuine Carl Zeiss lenses is your guarantee of complete satisfaction. The factory cuts and grinds these lenses from carefully selected glasses which are products of constant research in the optical field. All air-to-glass surfaces are hard coated (anti-reflection coating) for increased light transmission

and greater image contrast. The lenses are carefully matched for color rendition. Precision mounts ensure perfect fitting; distance scales are calibrated in feet.

The built-in fully automatic pre-set diaphragm of 35 to 135mm lenses couples automatically to the exposure controls of the camera as soon as such a lens is fitted to the Contarex. The necessary connecting parts cannot interfere with the operation of the camera because they are placed inside the lens mount. The 21mm Biogon and 250mm Sonnar feature conventional, hand-operated diaphragms without interlock; the 250mm Sonnar can be pre-set manually.

Lens Carrying Case #20.7842 for three Contarex lenses and accessories.

LENS SPECIFICATIONS

	Angle of view	Elements	Smallest aperture	Closest distance	Approximate min. coverage
Biogon f/4.5, 21mm (13/16")	90°	8	f/22	3 ft.	3' 1" x 4' 8"
Distagon f/4, 35mm $(1\frac{3}{8}")$	63°	7	f/22	8"	23/4" x 4"
Planar f/2, 50mm (2")	45°	6	f/22	12"	3 ³ / ₈ " x 5 ¹ / ₄ "
Tessar f/2.8, 50mm (2")	45°	4	f/22	15"	$4^{1/2}'' \times 6^{3/4}''$
Sonnar f/2, 85mm $(3\frac{3}{8}")$	28°	7	f/22	30"	7" x 10½"
Sonnar f/4, 135mm (53/8")	18°	4	f/22	4'	7" x 10½"
Sonnar f/4, 250mm (10")	10°	4	f/22	8'	8" x 11"

BIOGON f/4.5, 21mm

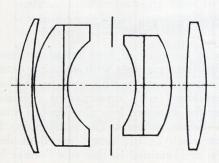

The 21mm Biogon, first 90 degree wide-angle lens in the 35mm field, is a completely new design based on a unique formula. It offers excellent definition over the entire negative area at full aperture (f/4.5), is free of distortion and provides outstanding illumination near the edges, which is a major problem with any wide-angle design. The tremendous depth-of-field $(3' \ 6'')$ to Infinity at f/4.5 makes it an excellent fixed-focus lens for instantaneous snapshots. It is also indispensable when photographing a large area at a comparatively short distance, for instance, charts, machines or testing equipment in small spaces. For the same reason photographers prefer the Biogon for architectural subjects and general indoor photography.

DISTAGON f/4, 35mm

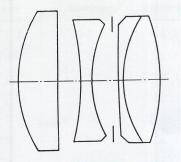

The Distagon is a universal wide-angle lens with crisp definition and excellent illumination over the entire field. It has an extremely long back focus to provide sufficient clearance for the mirror of single-lens reflex cameras. The Distagon is widely used in indoor photography and for scenic pictures whenever the 50mm standard lens does not give sufficient coverage. This lens focuses as close as 8", which is another interesting feature of its design.

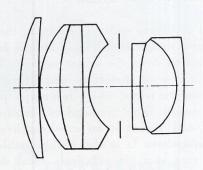

The Planar lens is based on a Carl Zeiss formula which dates back as far as the beginning of the century, and since that time it has undergone innumerable optical and mechanical improvements. Consequently the current f/2, 50mm Planar lens for the Contarex represents the ultimate in modern lens design.

Among other outstanding characteristics, the lens produces an exceptionally flat image with uniform and needle-sharp resolution over the entire field. The excellent correction of spherical and chromatic aberration and its proper rendering of contrasts, makes it a truly ideal standard lens for color and black-and-white photography. It focuses as close as 12" in its standard Contarex mount.

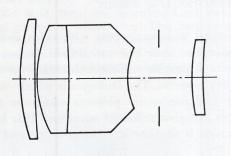

TESSAR f/2.8, 50mm

The Carl Zeiss Tessar, widely known the world over for more than 50 years, was included in the line of available Contarex lenses for several good reasons. Its needle-sharp definition and complete absence of distortion, for example, make it the ideal lens for architectural subjects, copy work of line patterns, and similar applications. Most photographers feel that the f/2.8 maximum opening provides sufficient speed with modern highspeed films. This lens is particularly recommended for the Contarex special.

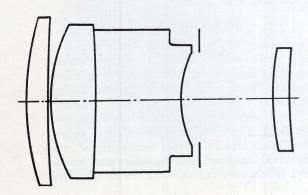

SONNAR f/2, 85mm

This Sonnar combines a medium telephoto effect with high lens speed and it is preferably used in sports, stage and press photography. Professionals also prefer this lens for taking portraits as it yields a large image from a distance, thus reducing the perspective distortion inevitable with shorter-focus lenses. From an optical point of view, high lens speed, good definition and outstanding illumination are the chief characteristics of this design. The comparatively short over-all length of the lens makes it very convenient in indoor and outdoor use.

SONNAR f/4, 135mm

Whenever the 85mm Sonnar lens does not provide sufficient magnification, this telephoto lens may solve your photographic problems. With 2.7X magnification as compared to the 50mm standard lens, it is very popular with sports photographers who wish to cover certain phases of the game from a distance. It is also needed in wildlife photography and for other types of distant shots. From an optical point of view this four-element lens is of truly outstanding correction. The critical aperture is f/4.5 (almost wide open) and smaller lens openings will not increase the definition of the lens but will only give a more extended depth-of-field. The 135mm Sonnar is also a short-barrel lens, a special feature of the Sonnar type.

SONNAR f/4, 250mm

This Sonnar belongs in the class of long telephoto lenses and produces extremely brilliant pictures with amazing detail. It is designed for those Contarex owners who need more than average magnification combined with unsurpassed definition. Its 5X magnification over the standard lens also lends a most interesting perspective to distant subjects. The outstanding features of the famous Sonnar such as brilliancy, excellent definition and even illumination are retained in this tele Sonnar lens.

Contarex Special

Contarex Special camera and interchangeable viewfinder components

Although the Contarex is widely considered the most versatile 35mm camera on the market, there are certain groups of photographers, serving the professional and scientific fields, who are interested in, and require other, technical features. Their suggestions have prompted the factory to design another Contarex model which was named "Contarex Special." This model meets the special requirements of these photographers as well as amateur photographers who find its features more appealing than the regular model. There is, however, no difference between Contarex and Contarex Special regarding workmanship, material, precision and dependability.

THE CAMERA BODY

The bodies of both the Contarex and Contarex Special are similar in basic design. The Contarex Special with f/2.8 Tessar lens weighs approximately 40 ounces.

VIEWFINDER AND RANGEFINDER

The Contarex Special features a convertible viewfinder arrangement which permits the photographer to switch from eye-level viewing with penta prism attachment to waist-level viewing with collapsible focusing hood in seconds. He also has the choice of using a full ground-glass screen or a split-image rangefinder with circular focusing screen. Both eye-level and waist-level viewfinders have their merits, and the use of one or the other largely depends on the subject matter to be photographed and individual techniques in focusing and composing the picture. In photomicrography and copy work, the full ground-glass with waist-level viewfinder has proved to be more practical than the split-image rangefinder as it better reveals the minute structure of the specimen when focusing. Both viewfinder systems are parallax-corrected and provide a very bright image. Most photographers will discover that they need both systems to be fully equipped to handle all areas of complex technical and scientific photography.

EXPOSURE METER

The Contarex Special is not equipped with a built-in exposure meter. We recommend the Zeiss Ikon Ikophot Rapid exposure meter for use with this camera.

ACCESSORIES FOR CONTAX IIa, IIIa CAMERAS 35mm

CONTAX Ha and IIIa

1932 Model CONTAX I-first 35mm, camera with built-in coupled range-finder. 1936 Model CONTAX II-successor to the Model I-so successful the world over.

1936 Model

CONTAX III-like CONTAX II, but with built-in photo-electric exposure meter.

1950-1961 Models

CONTAX IIa and IIIa cameras reflect the optical and mechanical refinement of nearly a century of manufacturing skill.

CONTAX cameras are now discontinued but, for the benefit of owners, we are still offering a limited stock in lenses and accessories subject to prior sale. Do not delay ordering necessary lenses and accessories.

CORE for Contax Cassette	20.0301	50

For using "bulk" film. By using a cassette at each end, films may be interchanged with a minimum loss and film need not be re-wound before unloading. This cassette is also used in the Contaflex cameras. Complete cassette furnished in container and with core (spool). Core supplied separately for replacement; it is not identical with take-up spool.

Contax Film Cassettes

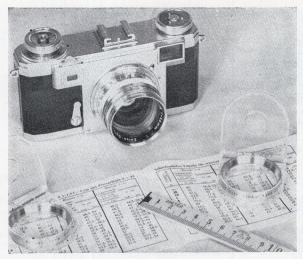

IKOPHOT RAPID photo-electric exposure meter in leather case with metal safety chain, for use with CONTAX IIa	20.2402	19.95
--	---------	-------

Calibrated in accordance with ASA standards, with both linear and cine shutter speeds, light values, reflected and incident light readings. Direct readings (no calculations required), instant one-hand operation, small, compact size: $\frac{3}{4}$ " x 2 $\frac{1}{4}$ " x 3"; weight $\frac{4}{2}$ ozs.

CONTAFLEX PRIMA, SUPER CAMERAS AND ACCESSORIES 35mm

CONTAFLEX

prima and super 35mm

Contaflex super

Contaflex prima

The Contaflex cameras are 35mm single lens reflex cameras of sturdy construction and unique design. The camera body is die-cast from a light metal alloy and covered with black morocco leather. Other outside metal parts are either black anodized or satin chrome finished for greater durability. The camera measures $5x3\frac{1}{2}x2\frac{3}{4}$ and weighs 26 to 30 ozs. depending on the model. These proportions give the Contaflex an extremely compact design. The optical elements are manufactured and installed with utmost precision and the Contaflex has proven to be extremely dependable in all parts of the world.

SPECIAL FEATURES

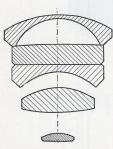

- 1. Interchangeable front elements in sturdy bayonet mounts.
- 2. Built-in between-the-lens shutter with full flash synchronization (MXV). Shutter blades are permanently protected by rear elements.
- 3. Extra bright eye-level viewfinder with upright and unreversed image.
- 4. Penta Roof Prism incorporates both split-image rangefinder and extra fine focusing screening; automatic pre-set lens diaphragm and automatic frame counter.
- 5. Lenses factory coated (anti-reflection coating).
- 6. The Contaflex uses standard 35mm cartridges or bulk 36 exposure loads. Negative size: $1x1\frac{1}{2}$ " (24x36mm.)
- 7. Current models feature built-in photo-electric exposure meters complying with ASA specification and coupled to the diaphragm.
- 8. All current models are equipped with rapid-wind lever for quick sequence shots.

Tenax Automatic Symbolica Continette Contessa Contessa-matic Contessa-matic E

D-2

TENAX AUTOMATIC (35mm)

Fully automatic 35mm camera with Carl Zeiss Tessar f/2.8, 50mm lens in Prontormat-S shutter (1/30th to 1/500th second). Built-in exposure meter, automatically selects appropriate shutter speed and "f" stop. Lens settings identified by symbols: Portrait, Group, Landscape. Built-in "X" type synchronization at 1/30 of a second for flash bulbs and electronic flash units.

The Tenax automatic camera

SYMBOLICA (35mm)

Automatic 35mm camera with Carl Zeiss f/2.8, 50mm lens in Prontormat shutter. Exposure meter interlocked with shutter, manually adjustable. Same lens symbols and same type of flash synchronization as Tenax.

CONTINETTE (35mm)

Standard 35mm camera with conventional shutter speed and "f" stop settings. Equipped with Carl Zeiss Lucinar f/2.8, 50mm lens in Pronto shutter (4 shutter speeds and B), built-in self-timer. "X"-type synchronization at all available shutter speeds.

The Symbolica camera

The Continette camera

CONTESSA-MATIC E (35mm)

Compact, automatic 35mm cameras with conventional shutter speeds and "f" stops, interlocked with built-in exposure meter. Equipped with Carl Zeiss Tessar f/2.8, 50mm lens in Prontor SLK special shutter (MXV), built-in range-finder. Exposure meter manually adjustable at waist and eye level.

The Contessa-matic E camera

CONTESSA-MATIC (35mm)

Same lens and shutter as CONTESSA-matic E. Built-in exposure meter adjustable at waist level.

CONTESSA (35mm)

Standard 35mm camera with Carl Zeiss Tessar f/2.8, 50mm lens in Pronto shutter $(1/30,\ 1/60,\ 1/125,\ 1/250$ and B). Built-in self-timer, built-in – not coupled – exposure meter.

The Contessa-matic camera

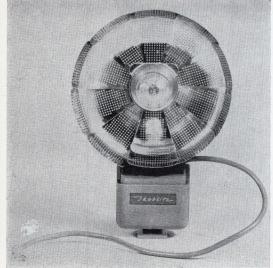

The Contessa camera

CONTESSA-matic E, CONTESSA-matic and CONTESSA camera feature a bright line viewfinder with large eye piece. Conveniently-located rapid advance film lever which is flush with camera body and collapsible rewind crank.

Movilux 8a (8mm Projector)

A new, modern 8mm Projector of beautiful streamlined shape and pleasant all-round appearance. Its small, compact design is unique in the 8mm movie field. The new low-voltage lamp with built-in mirror provides a surprisingly brilliant image with a marked absence of heat. The superior Carl Zeiss P-Sonnar f/1.3, 20mm lens assures pin-point sharpness on the screen. The Projector offers the possibility of using a sound synchronizer which plugs right into the Projector. Any tape recorder can be used for sound synchronization with this device.

IKOMAT AUTOMATIC 2x2 in. SLIDE PROJECTOR WITH REMOTE CONTROL

The Ikomat is a completely automatic projector for regular 35mm. color slides and "super slides." Its streamlined appearance, smart two-tone finish and traditional Zeiss Ikon workmanship make it the ideal projection equipment for the quality-minded photographer. With a 12-foot remote control cord, he runs the complete slide show while sitting with the audience. At the touch of three buttons, he feeds the slides through the projector—forwards or backwards—and simultaneously adjusts the focus of the lens. Other features are:

- 1) Smooth and virtually silent operation.
- 2) Protection of treasured slides against damage.
- 3) Slides are pre-conditioned to prevent "popping."
- 4) Perfect ventilation to keep projector cool.
- 5) Extra bright, sharp image with Zeiss Ikon Diatar f/2.5, 100mm. lens and built-in aspheric condenser system.

The IKOMAT can be used with the Diatakt tape recorder synchronizer, which synchronizes the commentary or music with the automatic change of slides at pre-selected intervals.

The Ikomat Automatic Slide Projector

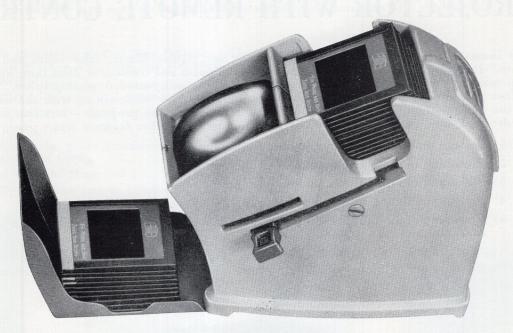

OVERALL DIMENSIONS: 111/2" x 81/4" x 71/2"

WEIGHT: 15 lbs.

LAMPS: 120-volt, 500-watt lamp (DAK) or 120-volt, 300-watt lamp (CWD).

THE ZEISS IKON IKOSCOP TABLE SLIDE VIEWER

The Ikoscop Table Slide Viewer

This modern, two-tone plastic table viewer accepts up to 25 cardboard-mounted slides at a loading. A single stroke of the lever, which collapses flush with the casing when not in use, shifts each slide under the brilliant viewing lens and simultaneously drops the previous slide into a receptacle which, when not in use, swings flush with the casing to protect the viewing lens from dust and damage.

The Ikoscop Table Viewer operates on 110-volt A.C. current and uses a candelabra-based 15-watt lamp. Vents assure ventilation and protect slides from over-heating.

The Ikoscop measures 3 x 5 x 6 inches over all and weighs 14 ounces.

A Film Strip Holder is available as an accessory.

The smaller over-all dimensions of the new CARL ZEISS binocular came about through the introduction of an objective with air-spaces. Marginal sharpness is considerably improved by the use of oculars with six elements.
