

Bolex Underwater Housing

This underwater housing has been designed specially for Bolex H16 cameras with built-in electric motors and fitted with Switar 10 mm f/1.6 or Macro-Switar 26 mm f/1.1 lenses. Provision has therefore been made to hold the batteries needed for powering these cameras.

The Bolex underwater housing enables you to shoot films underwater with the utmost safety and ease.

The very strong case is capable of withstanding water pressures down to a depth of 320 ft. Perfect hermetic sealing is ensured by O-rings offering the maximum reliability.

All metal parts both inside and outside are fully protected against corrosion.

Focusing and framing are carried out through the camera's own reflex viewfinder. The advantages of this compared with an outside viewfinder located, for example, on the side of the underwater housing,

sing, are obvious: first of all the problem of parallax is solved, and second the precision of focusing and framing makes even macro shots possible.

Shape, weight, general structure position of the controls and handles have been designed to ensure optimum stability for underwater filming and at the same time allow complete freedom of movement. Preparing the camera for underwater use is simplicity itself: all you have to do is fit two toothed setting collars on the lens and fix a viewfinder adaptor on the eyepiece; the camera is very easily and quickly put into the housing.

Holes for fixing the underwater lamp (or other accessories)

reliable, functional

Eye-piece with viewfinder adaptor,
for framing and focusing through
the reflex viewfinder on the camera

Light alloy case in two parts

Stabilizer fins

Locking cams (patented) : they
ensure rapid and reliable fastening
of the housing

Release lever operating an
electric switch located inside
the case

Handles ; the diver
can easily operate
all controls while
keeping his hands on
the handles

Milled focusing knob acting on the
lens ring via precision bevel gears

Milled diaphragm setting knob acting
on the lens ring via precision bevel
gears

Very strong acrylic glass porthole

Skai carrying case.

Kit of accessories containing:
 1 cam tightening lever, 1 key for tightening the fixing screws on the handles and stabilizer fins, 1 viewfinder adaptor, 1 tin of silicone grease, 1 set of setting collars for the Switar 10 mm f/1.6 lens, 1 set of setting collars for the Macro-Switar 26 mm f/1.1 lens.

The case and kit are supplied with the underwater housing.

Quality and reliability

Bolex products are all manufactured with the utmost care and subjected to searching tests. They therefore satisfy the highest standards of precision and superior quality for which the name of Bolex is world renowned. In choosing Bolex, you can be sure of owning a camera on which you can rely completely, under all circumstances. Thanks to its international organization, Bolex offers you impeccable service all over the world; you can entrust your camera with complete confidence to any Bolex distributor, most of whom have their own highly skilled technicians specially trained in Switzerland.
