

The more creative you are, the more you need

LANE FILM BACKS

Model III and Model G

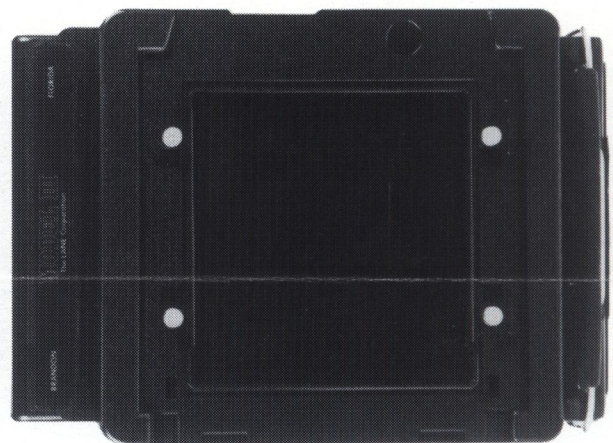

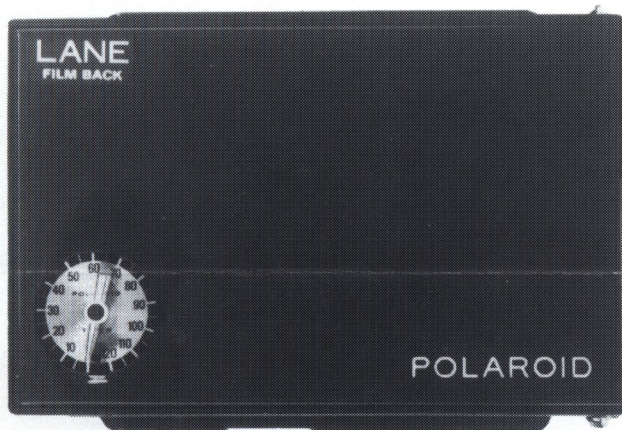

for use with POLAROID FILM
and Mamiya RB-67, PRO-S,
Graflex-XL and Brooks VW cameras.

Actual picture from Model III with Type 107 film.

Lane Film Backs are designed for the creative professional photographer who wants to test his new ideas in minutes. Lane Film Backs are just right for exposure tests, lighting checks, and approval of composition and balance.

Model III fits Mamiya RB-67 and PRO-S cameras. Model G fits Graflex-XL and Brooks VW cameras and increases their coverage. This is very important with Type 105 and 665 P/N film since the negative is up to 85% larger than roll-film backs can provide. (Refer to the chart on back for increases in degree of diagonal coverage.)

Lane Film Backs are a necessary addition to every professional photographer's system.

FEATURES

- Built-in adapter unit comes ready to use
- Uses up to eight different Polaroid film types
- Film speed adjustment chart included
- Attaches easily
- Timer available (Adjustable 0-120 secs.)
- Sturdily constructed
- Professional black appearance
