

NPC FILM HOLDERS FOR POLAROID SX-70 INSTANT PHOTOGRAPHY WITH MAMIYA RB67 CAMERAS

MODEL MF-6 \$270.00 List

Lightweight, durable plastic body with aluminum and stainless steel interface and locking mechanism.

18 ounces, 4 $\frac{3}{4}$ X 6 X 2 inches

The Model MF-6 permits the use of SX-70 Time Zero film on Mamiya RB-67 cameras. It is indispensable to the working photographer for instant evaluation and proofing of exposure, lighting, color and composition. It allows the photographer to ensure that his equipment is functioning properly and that results will be satisfactory before time and money are invested shooting and developing conventional film.

The Model MF-6 is motorized, allowing automatic and uniform processing of every print. SX-70 film eliminates the need to time the development of prints and in addition there is nothing to pull apart or throw away. It should be noted that because SX-70 film does not utilize a negative, prints produced on a conventional camera, such as the RB-67 will be reversed (e.g. any lettering in the print will read backwards.)

NPC FILM HOLDERS ARE DESIGNED AND MANUFACTURED TO PRECISION OPTICAL AND MECHANICAL TOLERANCES TO ENSURE A PROPER AND ACCURATE INTERFACE WITH ALL MAMIYA RB67 CAMERAS. THE KEY DESIGN FEATURES ARE:

- QUICK, SIMPLE, AND POSITIVE INTERLOCK MECHANISM.
- NO P ADAPTER IS REQUIRED, THE UNIT ATTACHES DIRECTLY TO THE CAMERA BODY.
- FILM PLANE LOCATION MEETS POLAROID'S SPECIFICATIONS FOR USE WITH SX-70 FILM. TO ENSURE PROPER FILM PLANE LOCATION, THE INTERFACE IS ALL METAL, CONSISTING OF A MACHINED ALUMINUM DIE CASTING WITH STAINLESS STEEL LOCKING PINS.
- YIELDS A 2 7/8 INCH SQUARE PHOTOGRAPH.
- UNITS ARE LIGHTWEIGHT, EASY TO HANDLE, AND VIRTUALLY UNBREAKABLE.
- ACCEPTS POLAROID SX-70 TIME ZERO AND TYPE 708 BATTERYLESS FILM. THE BACK INCLUDES A SPECIAL RECEPTACLE FOR CONNECTING AN INDEPENDENT DC POWER SOURCE, PERMITTING FILM TYPE 708 WITHOUT BATTERIES TO BE USED. THIS CAN BE USEFUL IN HIGH VOLUME APPLICATIONS SINCE TYPE 708 FILM IS LESS EXPENSIVE.
- HAS CONVENIENT HOLDER FOR STORING THE STAINLESS STEEL DARK SLIDE WHILE THE BACK IS IN USE.
- STAINLESS STEEL DEVELOPING ROLLERS ARE MOTOR DRIVEN. THE PROCESSING OF PRINTS IS INITIATED BY A SMALL PUSH BUTTON OR A REMOTE CABLE THAT PLUGS INTO THE BACK. AN ACCESSORY CABLE IS AVAILABLE FROM NPC THAT CONNECTS THE BACK TO THE PC CONNECTOR ON THE RB-67 AND CAUSES THE PRINT TO BE PROCESSED AUTOMATICALLY WHEN THE SHUTTER CLOSES.
- ONE YEAR WARRANTY FOR ALL DEFECTS IN WORKMANSHIP AND MATERIALS.
