

Now, a truly  
modern  
automatic  
slide projector  
featuring famous  
Nikkor optics

## NIKKORMAT

- superb 4" Nikkor f3.5 lens
- completely self-contained design • unlimited slide-handling versatility • automatic, remote, pushbutton, and manual operation

Built to our own rigid specifications and quality standards, the new Nikkormat automatic slide projector provides every convenience, every feature and facility to help make each slide showing the easy, enjoyable, trouble-free performance it was meant to be.

Brilliant, efficient illumination combines with famous Nikkor optics to bring out the best projection qualities in every slide—the full range of sparkling colors and all the sharpness put there by the camera lens.

The Nikkormat is supplied complete with one Rototray® and one Easy-Edit® tray, 10' remote control cord and 500-watt projection lamp.

## FEATURES

**Self-contained design** There is no carrying case to stow away, no cover to handle, and no picking-up-the-pieces after the show. Simply flip the lid on the slide tray channel, push two sliding doors to cover power switch and lens, and the Nikkormat is fully encased.

**Retractable power cord** Attached to the hub of a spring-wound reel, the cord retracts into its own housing, with just enough of the business end exposed to let you withdraw it to any length up 10 feet and lock it.

**Slide-handling versatility** The Nikkormat takes any of the following:

- 100-capacity Rototray\* slide trays, *or*
- Easy-Edit\* straight trays, *or*
- low-cost TDC-type straight trays, *or*
- Stack-Loader\* for up to 40 slides without trays, *or*
- single slides.

**Automatic, pushbutton, remote, and manual operation** Choice of a wide range of controls:

- built-in electric timer for automatic slide change at preset intervals (up to 30 seconds), *or*
- operate pushbutton panel with electrical controls for focus, slide change, forward and reverse, *or*
- detach pushbutton panel, plug into remote control cord and operate same buttons up to 10 feet away, *or*
- rotate knob for focus; use pull-push carrier for changing slides manually.

Uses standard DAK 500-watt projection bulb. Turbine blower assures efficient heat dissipation. Prewarming feature minimizes slide-popping during projection.

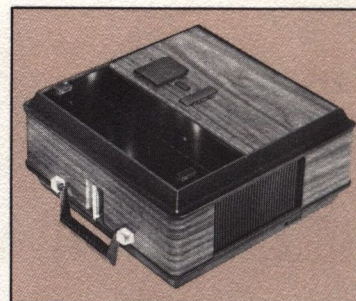

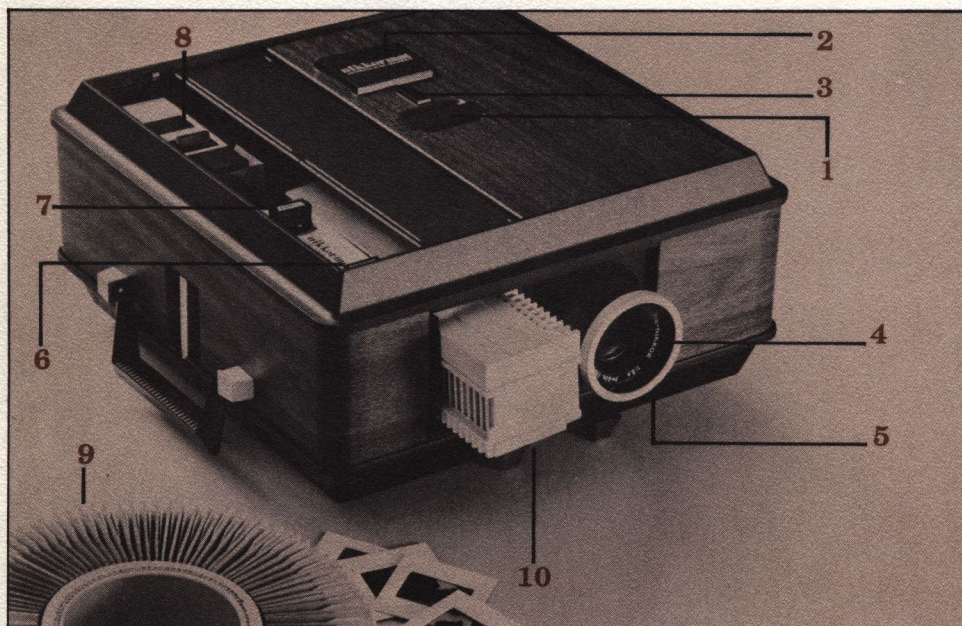

**Nikkor 4" f3.5 lens** This unique Nikkormat feature brings the world's most famous name in optics to slide projection. The amazing sharpness and color transmission of the coated Nikkor lens are readily demonstrable. Its 4" focal length provides a comfortably large image at convenient screen distances with all slide formats. Rack-and-pinion focusing.

**Condenser shift control** To achieve maximum brightness and uniform, edge-to-edge screen illumination with different 2x2 slide formats, the condenser can be shifted to either of 2 positions: one for super slides and full 35mm; the other for Instamatic, half-frame and sub-miniature. The condenser is easily accessible. Indicator on top of projector shows condenser position with pinpoints of light.

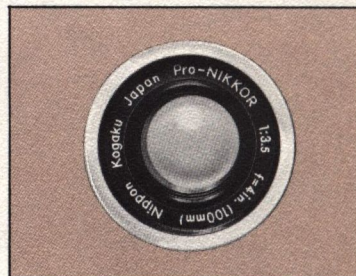

**Single-slide editor** permits removal of slide in aperture gate for cleaning, repositioning or substitution. Also serves for projection of single slides in the middle of any sequence, as well as for previewing and selecting slides for storage in trays.

**Illuminated viewing panel** permits examination of slide without turning on room lights. Snap-lid covers panel when not in use.

**Decorator styling for office and home** Walnut grained vinyl on metal and jet black trim provides attractive yet rugged, protective enclosure. Blends with any decor.

Closed view shows trim, modern styling.
