

**Fast-handling  
camera with  
interchangeable  
lenses uses rollfilm,  
sheet film and packs**

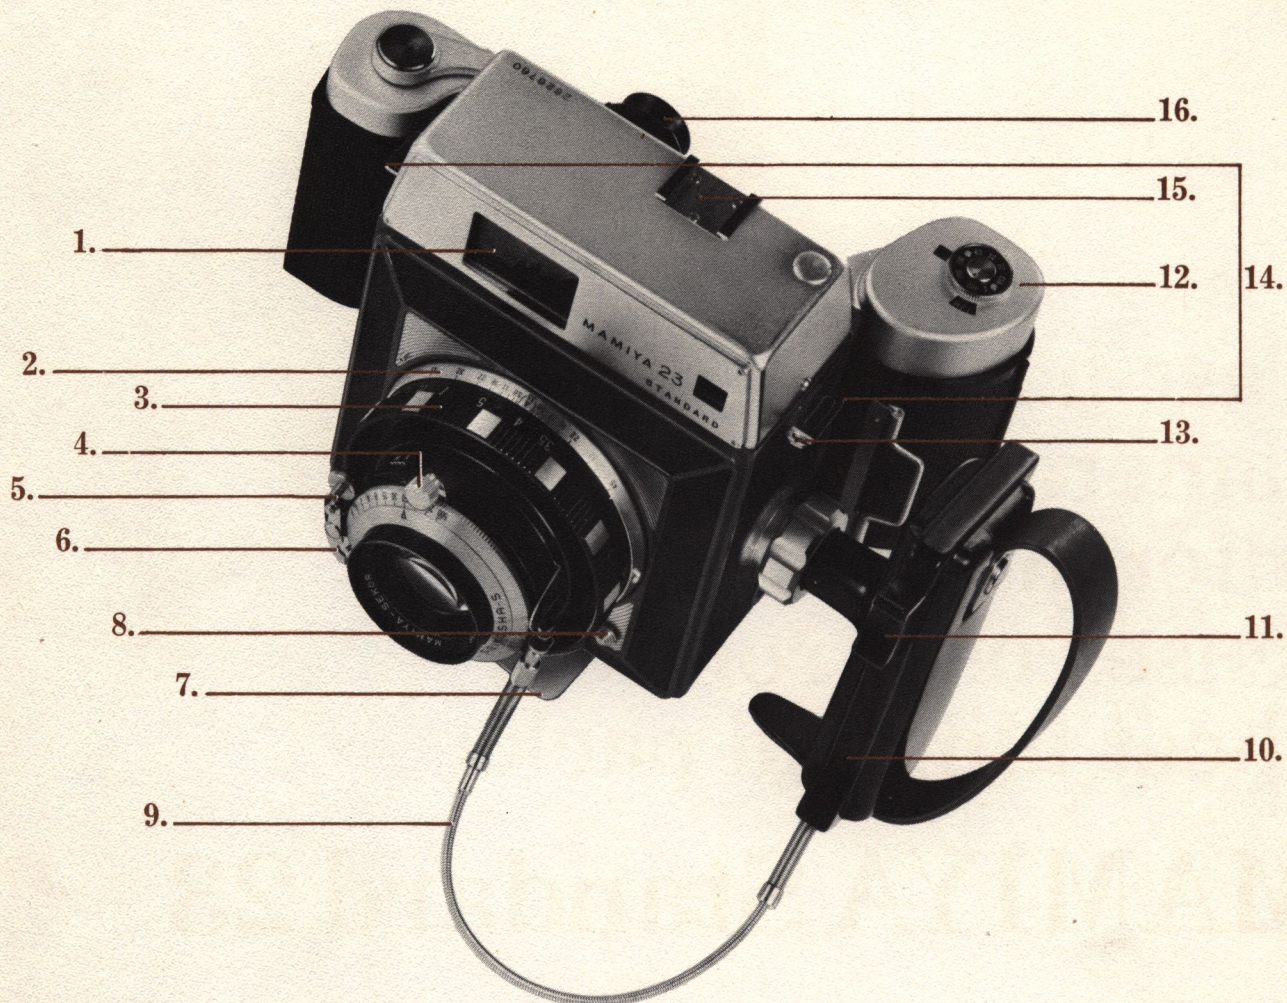

## **MAMIYA Standard 23**

Compact, rugged and versatile, the Standard 23 offers all the basic advantages of the Super 23 where back movements are not required. The sturdy trigger grip holder and combined range/viewfinder with parallax correction to 3½ feet provide convenience and accuracy for hand-held shooting.

Interchangeable, rangefinder-coupled lenses for the Standard 23 range from 50mm ultra-wide angle to 150mm telephoto—the same optics used with the Super 23. Each is equipped with helical mount and over-sized, knurled focusing ring, and has its own M-X synchro shutter with speeds from 1 second to 1/500th plus B.

Rapid 120/220 rollfilm holders attach directly onto the camera back and can be switched at any time. Holders for 2¼x3¼ sheet film and 520 film packs fit into the accessory ground glass attachment. These are part of the same system of accessories that contribute to the practical versatility of all Mamiya 23 cameras.

# FEATURES

1. Viewfinder window with sliding mask for 150mm lens—2. Depth-of-field scale—3. Knurled focusing ring—4. Extra-large shutter-cocking lever—5. Standard PC flash terminal—6.
