

**New Nikon F  
finder permits  
eyelevel viewing  
with camera  
2½" from eye**

## **PRISM REFLEX SPORTSFINDER**

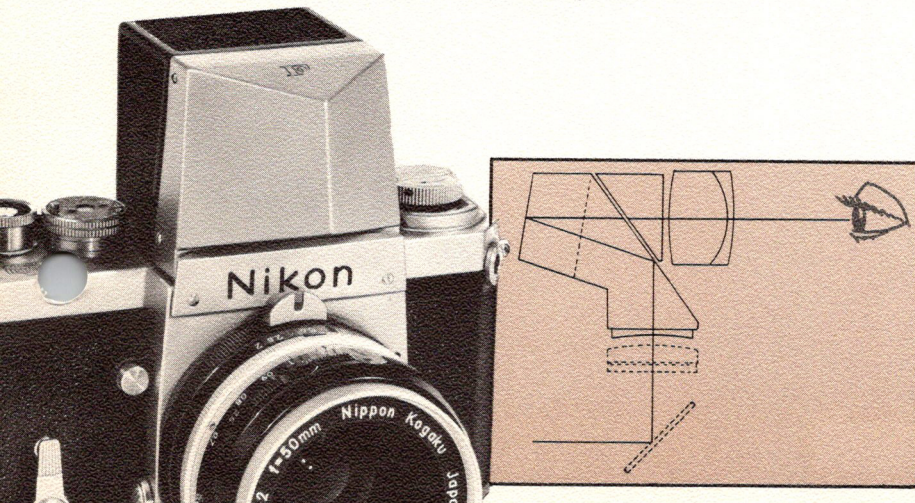

The advantage of this finder for sports, news, and action photography is almost self-evident.

It offers added comfort and convenience to eyeglass wearers, and it is extremely useful where the camera is mounted on a tripod, and the scene is to be viewed by several people. Also, because it shows all corners of the finder image while the photographer is wearing protective goggles, it is especially desirable for specialized applications in industrial and aerial photography, underwater photography and others.

The Prism Reflex Sportsfinder has an oversized, rectangular eyepiece which measures approximately 1 x 1⅝ inches. It is a noteworthy optical accomplishment, in that the complexities of high-eyepoint design have been overcome without sacrificing brilliance and acuity, or compactness and lightweight construction.

The Prism Reflex Sportsfinder (Cat. No. 2303) fits all Nikon F cameras and interchanges with all other Nikon F finder systems.

**Visual Magnification:** 0.7x, with 50mm lens  
**Dimensions:** 2⅝" (h) x 2½" (w) x 2⅜" (d)
