

PLATES and FILMS

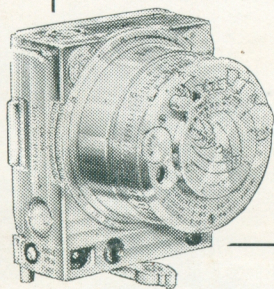

for the Compass Camera

Plates for the Compass Camera are sold in boxes of one dozen. Each one is enclosed in its own complete darkslide and may be used immediately. Loading and unloading is accomplished in full daylight.

Roll-films for use with the Roll Film Back are daylight loading and are made to take six exposures each spool. They are packed in cartons each containing two spools.

The Compass Unit Factor which is marked on each plate and spool makes the estimation of the correct shutter speed a matter of the utmost simplicity. The Compass Unit System is fully explained in Section 3 of the Instruction Booklet.

**BUILT LIKE
A WATCH:
AS SIMPLE
TO USE.**
