CORONET *midget*

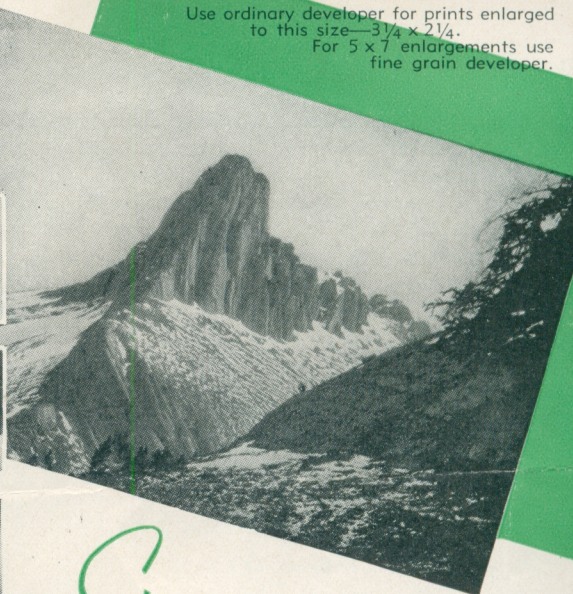

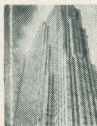

*The TOM THUMB
of CAMERAS*

*With Taylor Hobson
GROUND LENS*

THE Coronet Midget, imported from England, is a small camera of finest workmanship, combining extreme compactness with great precision. Its special Taylor Hobson ground lens and the high quality fine-grain 16 mm. Coronet film produce negatives which may be enlarged up to 5 x 7 inches with excellent results.

The Coronet Midget may be carried in the watch pocket or in a lady's handbag. It weighs only 1¾ ounces. With this camera you can "shoot" the unexpected scene or subject, without attracting notice. Snap whatever interests you—amusing incidents, pets at play, sporting events, celebrities, candid shots of your friends. The Coronet is not a "folding" camera. It is always ready for instant use.

The Coronet Midget is equipped with every refinement for good photography, including a clear, luminous optical viewfinder; a self-focussing lens with an f/10 aperture; a Coronet one-way shutter with a speed of 1/30 second; a safety catch to prevent accidental exposures. Loading and unloading are accomplished in daylight. Special flexible leather case available at a small additional cost.

Sharp DEFINITION!

● The sharp definition and fine optical corrections of its Taylor Hobson lens afford negatives which may be enlarged to at least 5x7" without loss of detail or tone and with all the clarity and finish of a contact print. The lens is automatically set so that it will provide correct focus for any distance from 5 ft. to infinity. There is no distance scale to manipulate—there are no unnecessary and complicating gadgets to interfere with the quick and precise action of this truly marvelous and ingenious little camera.

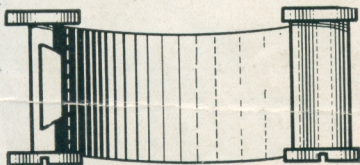

● The Coronet Midget is of staunch and handsome bakelite construction and can be furnished in Rose, Green, Walnut and Black. Moderately priced at \$2.50

\$ 2.50

IMPORTANT

Do not look upon the Coronet Midget as merely a "vest pocket" camera. It is much more than that. The Coronet is truly a fine photographic instrument. In every detail of construction—the beautiful Bakelite case, the exceptional lens, the instant, unfailing shutter action—the Coronet is the world's finest miniature camera, as well as the smallest. Many thousands of Coronet Midgets are in use the world over.
